DIRECTIONAL CONTROL VALVES SOLENOID OPERATED - STACKABLE

HDFH-ES 0025

1 HDF stackable valves

DIRECTIONAL CONTROL VALVES SOLENOID OPERATED - STACKABLE

HDF-ES-*

25 l/min - 25 MPa (250 bar)

1 DESCRIPTION

Distributors HDF type are the basic elements for building blocks through horizontal assembly without the need of additional manifolds. Channels A, B outputs at the upper surface of the body are provided with threads G1/4. The individual distributor bodies are connected into a compact block using three bolts. Directional valves and the other modules can be combined in order to have different hydraulic circuits. The basic surface treatment of the valve housing phosphate coated and the solenoids are zinc coated.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)	(7)
HDF	-	ES	-	-	-	/ 10

(1) HDF: 4-way directional control valve – Pressure 25 Mpa (250 bar)

(2) Ports variants (see 8):

- no designation: standard version
- C : P and T not passing (closing element with seals)
- B : P and T not passing (closing element without seals)
- 2 : additional ports A and B on mounting surface

(3) ES: electrically controlled, standard

(4) Spool type (see 4):

- number is the main spool type
- letter is the solenoid or spring arrangement:
 - C : 2 solenoids, spool is spring centered (3 position)
 - N : 2 solenoids, spool is detented (2 position)
 - LL : 1 solenoid (a), spool is spring offset (2 position, end to end)
 - ML : 1 solenoid (a), spool is spring offset (2 position, middle to end)
 - LM : 1 solenoid (a), spool is spring offset (2 position, end to middle)

(5) Code reserved for option and variants:

- b : only for version LL, ML, LM solenoid b installed (instead of solenoid a)
- S-**: calibrated orifice on P port (see 9)
- ZT : body, solenoid tubes and coils are zinc trivalent plated

(6) Electric voltage and solenoid coils:

- 0000: no coils
- 012C: coils for V12DC
- 024C: coils for V24DC
- 220R: coils for V220/50 – V230/60 AC

(7) Design number (progressive) of the valves

Spools, spring and solenoids combination permit to obtain almost every type of ports (P, A, B, T) connection and sequence.

For almost all types of solenoids/springs combination and for all type of spools (with the exception of spool 4), when solenoid "a" is energized, hydraulic connections are P-> B and A->T ; to obtain P->A and B->T solenoid "b" must be energized. The hydraulic connections that are obtained in the "central" (neutral) position when solenoids are not energized is the characteristic mark of the spool shape and from it derives its identification number:

- 0 = P, A, B, T connected
- 1 = P, A, B, T closed
- 3 = P closed, A, B, T connected.

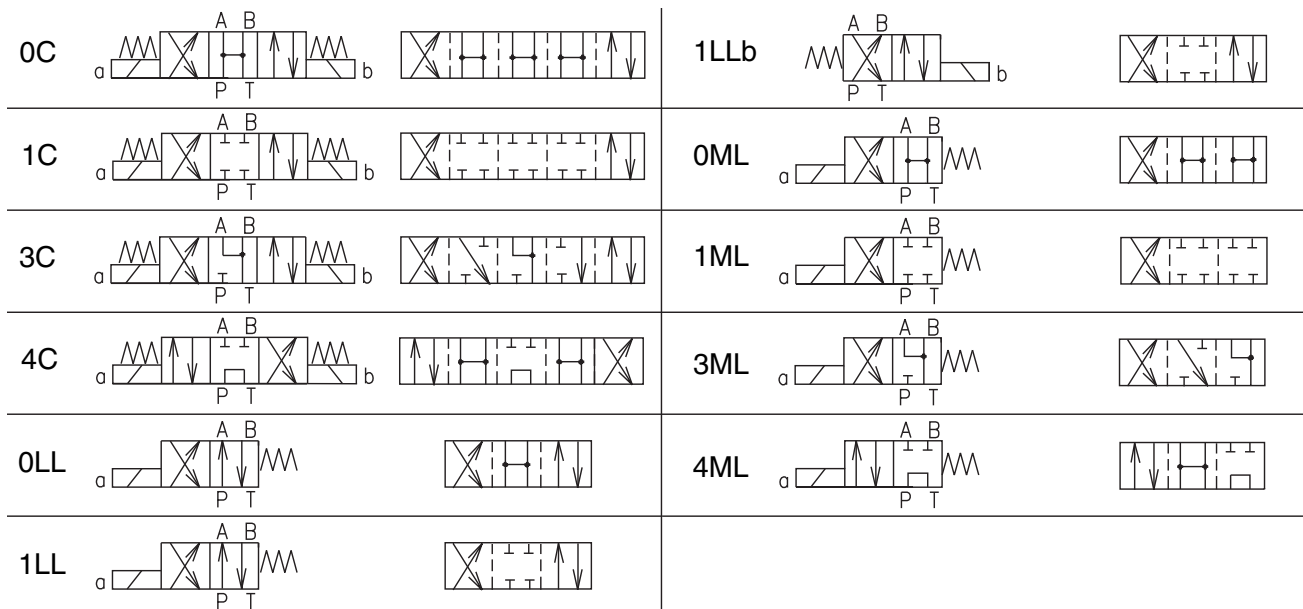

For other types see 4

3 TECHNICAL DATA

Maximum nominal flow	20 l/min	Electric characteristics: Valves HDF-ES-* are operated by solenoid that are energized: - directly from a D.C. voltage supply: V 12 DC V 24 DC - by the use of connectors that incorporate a full wave bridge rectifier, from A.C. voltage supply: V 220/50 (V 230/60). All connectors must conform to ISO 4400 (DIN 43650) and electric circuitry must be able to carry the following rated current values: V 12 DC = 1,83 A V 24 DC = 0,92 A V 220 R = 0,08 A Permissible supply voltage variation: +5% -10%
Maximum rec. flow rate	25 l/min	
Maximum nominal pressure (P, A, B)	25 MPa (250bar)	
Maximum pressure at T port	200 MPa (200bar)	
Pressure drops	see [5]	
Protection to DIN 40050	IP 65	
Duty cycle	100%	
Service life	$\geq 10^7$ cycles	
Installation and dimensions	see [7]	
Mass	1,04 - 0,9 Kg

1 HDF stackable valves

Stackable Hand Pump

AMF-HP2

2 cm³ - 20 MPa (200 bar)

1 DESCRIPTION

Stackable hand pump for HDF valves serie.

With this hand pump it is possible to operate the hydraulic systems even if there is no power supply. It is normally very useful as emergency tool. The hand lever can also be installed only in case of necessity in order to save space.

The body of the valve is in Aluminium.

2 ORDERING CODE

(1)	(2)	(3)	(4)
AMF	-	HP2	/ 10

(1) AMF: module stackable with 4 way solenoid valve type HDF-ES

(2) HP2: hand pump 2 cm³

(3) Code reserved for options and variants

(4) Design number (progressive) of the pump module

On the intake stroke piston 1 moves backward and fluid flows from port T through check valve 4, while check valve 2 is kept close. When lever moves piston 1 forward, check valve 4 is kept close by spring 3, while check valve 2 opens and permits fluid to flow in pressure line.

3 TECNICAL DATA

Displacement	2 cm ³ each (double) stroke
Maximum pressure	200 bar
Lever is normally used only in case of emergency and can be screwed in two different position (vertical or horizontal)	

4 INSTALLATION DIMENSIONS (mm)

5 HYDRAULIC FLUIDS

Seals and materials used on standard valves AMF are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidantizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 21/18/15, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

IN LINE THROTTLE VALVE

HFC-14

20 l/min - 35 MPa (350 bar)

1 DESCRIPTION

This in line throttle valve is very useful to control the flow rate out from the ports A and B of the HDF valves. It can be easily installed and rotated in order to be easily accessible.

2 ORDERING CODE

(1)	(2)	(3)	(4)
HFC	-	14	/ 10

- (1) HFC: Flow control for HDF valves
- (2) 14: size G1/4
- (3) Code reserved for options and variants
- (4) Design number (progressive) of the pump module

Example of HDF-ES-* with HFC-14 installed

When fluid flows from A to B the check ball 6 (kept in its position by the spring 5) closes the main passage, thus the fluid passes through the restricted annular section, which area depends on the position of the throttling spool 3. During flow from B to A the fluid shifts the check ball 6 against the spring 5 thus permitting free flow. Typically HFC-14 valves are mounted on the A and B ports of HDF-ES-*** solenoid valves; the presence of "turning joint" 2, acting on nipple 1, allows easy installation and contemporary mounting of flow valves on both A and B ports.

3 TECNICAL DATA

Maximum nominal flow	20 l/min
Maximum nominal pressure	25 MPa (250 bar)
Mass	

4 INSTALLATION DIMENSIONS (mm)

INSTALLATION

1. Lock the nipple 1 in a G1/4 port.
2. Put O-Ring 8 in its seat.
3. Fit the male thread of the valve in the turning connector.
4. While keeping the valve in the desired final orientation, screw the turning connector until blocking.

ADJUSTMENT OF THE REGULATED FLOW

To reduce the flow rate in the regulated direction (A -> B) turn clockwise knob, after having unlocked its retaining screw.

5 TYPICAL DIAGRAMS

PILOT OPERATED CHECK VALVE

AMF-CP-AB

20 l/min - 25 MPa (250 bar)

1 DESCRIPTION

Pilot operated check valve to be used with HDF2-ES directional valves which have the ports A and B plugged.
Steel body and high precision machining of the internal parts assures a long service life and an high tightness.
The standard coating is the phosphate coating. On demand it is possible to have the zinc coating for an higher protection degree.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)	
AMF	-	CP	-	AB	/	10

- (1) AMF: module stackable with 4 way solenoid valve type HDF2-ES (with P and T passing)
- (2) Type end of stack module:
no designation: standard
C: end of stack module (P and T plugged)
- (3) CP: check valve, pilot operated (hydraulically)
- (4) AB: service lines where the controls operate
- (5) Code reserved for options and variants
- (6) Design number (progressive) of the valves

Fluid flows freely on P and T lines (AMF-CP-AB). Fluid is blocked on P and T lines (AMFC-CP-AB). On service lines A and/or B with p.o. check, fluid flows A --> A1 (and/or B --> B1) overcoming the force of spring acting on poppet and fluid is blocked A1--> A (and/or B1 --> B). When, by switching the solenoid 4-way directional valve, pressure is made available, at, for instance, port B, fluid flows B --> B1 and the pilot piston 3, shifting from its central position, forces poppet 2, on service line A, to open and permit flow A1--> A.

AMF-CP-AB

AMFC-CP-AB

3 TECHNICAL DATA

Maximum nominal flow	20 l/min	Pilot area ratio piston/check valve	approx 4.7
Maximum rec. flow rate	25 l/min	Piloting pressure	To shift the pilot piston and to open the check in A the piloting pressure must be, at B:
Maximum nominal pressure	25 MPa (250 bar)		$P_p = P_b = \frac{P_{a1} + P_m \cdot P_a}{4.7}$
Material	Steel body		Were: P_p = Piloting pressure

AMF COMBINED PRESSURE RELIEF

AMF-MOP/*

20 l/min - 25 MPa (250 bar)

1 DESCRIPTION

With this module it is possible to have the pressure relief function of the main HDF system. In combination with the pressure relief function it is possible to add other flow controls in order to bleed a specific flow to the T line.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)

Bleeding flow, taken from main P line, is regulated by a variable pressure compensated flow control valve (FT 268/2), that changes the flow rate to T line. To decrease bleeding flow rate, from main P line to main T line, turn anticlockwise the graduated knob of valve FT-268/2-34

AMF PRESSURE RELIEF COMBINED WITH ELECTRIC BY-PASS

AMF-MOP/*-EV2*

20 l/min - 25 MPa (250 bar)

1 DESCRIPTION

With this module it is possible to have the pressure relief function combined with the by-pass of the main HDF system. The by-pass valve can be normally open or normally closed. As standard the valve is a spool type valve. For specific requirements, a poppet valve with a standard SAE08 cavity can be installed in the main body.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
AMF	-	MOP /	-	EV2	-	-	/ 10

(1) AMF: module stackable with 4 way solenoid valve HDF-ES

(2) MOP: pressure relief on P line

(3) Pressure adjustment ranges:
 10 : from 32 to 100 bar
 16 : from 63 to 160 bar
 25 : from 100 to 250 bar

(4) EV2 : spool type 2/2 by-pass solenoid operated valve

(5) Variants:
 O: normally open
 C: normally close

(6) Code reserved for option and variants

(7) Electric voltage and solenoid coils:
 0000 : no coils
 012C : coils for V12DC
 024C : coils for V24DC
 220R : coils for V220-230 RAC

(8) Design number (progressive) of the valves

Fluid flows freely from P line to T line. The spool 17 is normally kept open by spring 13. When the solenoid 12 is energized, the mobile armature 11 overcomes the force of spring 13 and moves spool 17 thus closing passage between P and T. When on line P the pressure exceeds the settled value, the piston 5 is pushed by axial hydraulic forces, overcomes the force of spring 8 and shifts in its cylindrical seat and opens to the pressurized fluid annular passage to T, thus keeping the pressure level at the requested value.

1 HDF stackable valves

AMF DIRECT OPERATED PRESSURE REDUCING VALVE

AMF-RO-P/*

20 l/min - 32 MPa (320 bar)

1 DESCRIPTION

The module AMF-RO-P is designed to reduce the pressure in the P line. A 3 way cartridge valve with different pressure ranges is installed in a aluminium body suitable to be stacked with other HDF or AMF valves.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)			
AMF	-	RO	-	P	/	-	/	10

- (1) AMF: module stackable with 4 way solenoid valve HDF-ES
- (2) RO: direct operated pressure reducing valve
- (3) P: line where the control operates
- (4) PR regulated pressure range:
 6,3: from 1,6 to 6,3 MPa (16 to 63 bar)
 16 : from 4,0 to 16,0 MPa (40 to 160 bar)
 20 : from 5,0 to 21,0 MPa (50 to 210 bar)
- (5) Code reserved for option and variants
- (6) Design number (progressive) of the valves

This 3-way direct operated pressure reducing valve is designed to maintain the desired value of pressure in the exit line(s) PR. Normally fluid flows from P to PR. The pressure in line PR acts on the control spool 4 (against the force due to spring 3), that shifts closing flow P to PR until the pressure falls back to the set value. If pressure in PR line overcomes the set value, the spool shifts until it opens the passage PR to T, allowing the oil to flow to the tank. Additional M (manometer) G 1/4" port is available (normally is closed by plug 5).

3 TECHNICAL DATA

Maximum nominal flow rate	20 l/min
Regulated pressure	see 2
Maximum input pressure (P line)	for 6,3 -> 16 MPa (160 bar) for 16 -> 25 MPa (250 bar) for 20 -> 32 MPa (320 bar)
Mass	0,65 Kg

4 HYDRAULIC FLUIDS

Seals and materials used on standard valves AMF are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidantizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 21/18/15, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

5 INSTALLATION DIMENSIONS (mm)

Leakage between valve and mounting surface is prevented by the positive compression on their seats of 2 seals of OR type 2037 (9,25 x 1,78) or Quad-Rings (9,25 x 1,68 x 1,68 mm).

6 TYPICAL DIAGRAMS (measured at $v = 36$ cSt and 50°C)

AMF PROPORTIONAL PRESSURE REDUCING VALVE

AMF-RE-P/*

20 l/min 5 MPa (50 bar)

1 DESCRIPTION

The module AMF-RE-P is designed to proportionally reduce the pressure in the P line. A 3 way proportional cartridge valve with different pressure ranges is installed in a body suitable to be stacked with other HDF or AMF valves.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)	(7)			
AMF	-	RE	-	P	/	-	R*	/	10

(1) AMF: module stackable with 4 way solenoid valve HDF-ES

(2) RE: proportional pressure reducing valve

(3) P: line where the control operates

(4) PR regulated pressure ranges:
 2: from 0 to 2,0 MPa (0 to 20bar)
 3,2: from 0 to 3,2 MPa (0 to 32bar)

(5) R* supply voltage:
 *: 2 = coil for V12DC
 4 = coil for V24DC

(6) Connection to electric supply:
 no designation : standard 3-PIN according to ISO 44000 (DIN 43650)
 AMP: 2-poles AMP Junior-Timer

(7) Design number (progressive) of the valves

AMF-RE-P/* is a directly operated 3-way valve controlled by proportional solenoid 10. In the de-energized state, the spring 9 keeps the spool 5 in the position that closes the P line and connects PR line to tank. When the solenoid 10 is energized, it pushes the spool with a force proportional to the current. This force makes the spool shift, thus gradually opening the passage P-PR and closing the return line. In this configuration the reduced pressure in PR and the spring force act against the solenoid force. This balance is maintained by the spool 5 that opens the passage P-PR if the reduced pressure is lower than value sets by the solenoid, or opens the passage to tank if the reduced pressure overcomes the solenoid force. Additional M (manometer) G 1/4" port is available (normally closed by plug 1)

3 TECHNICAL DATA

Maximum nominal flow rate	20 l/min	Solenoid technical data:	
Maximum rec. flow rate	25 l/min	Control	PWM signal 100Hz
Maximum input pressure	5 MPa (50 bar)	Maximum current	12V: 1,5A 24V: 0,75A
Regulated pressure range	AMF-RE-P/2-R*: up to 2,0 MPa (20 bar) AMF-RE-P/3,2-R*: up to 3,2 MPa (32 bar)	Resistance at 20°C	12V: 7,2 Ω 24V: 21 Ω
		Duty cycle	100%
		Insulation class	F
		Enclosure type to DIN 40050	IP 65

4 INSTALLATION DIMENSIONS (mm)

Leakage between valve and mounting surface is prevented by the positive compression on their seats of 2 seals of OR type 2037 (9,25 x 1,78) or Quad-Rings (9,25 x 1,68 x 1,68 mm).

5 HYDRAULIC FLUIDS

Seals and materials used on standard valves AMF are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 21/18/15, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

32 bar

p-Q characteristics

1 HDF stackable valves

DIRECTIONAL CONTROL VALVES SOLENOID OPERATED - STACKABLE

HDFH-ES

50 l/min - 32 MPa (320 bar)

1 DESCRIPTION

Distributors HDFH type are the basic elements for building blocks through horizontal assembly without the need of additional manifolds. Channels A, B outputs at the upper surface of the body are provided with threads G3/8. The individual distributor bodies are connected into a compact block using three bolts. Directional valves and the other modules can be combined in order to have different hydraulic circuits. The basic surface treatment of the valve housing zinc coated and the solenoids are zinc coated.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)
HDFH	-	ES	-	-	/ 10

(1) HDFH: 4-way directional control valve – Pressure 25 Mpa (250 bar)

(2) ES: electrically controlled, standard

(3) Spool type (see 4):

-number is the main spool type

-letter is the solenoid or spring arrangement:

C : 2 solenoids, spool is spring centered (3 position)

N : 2 solenoids, spool is detented (2 position)

LL : 1 solenoid (a), spool is spring offset (2 position, end to end)

ML : 1 solenoid (a), spool is spring offset (2 position, middle to end)

LM : 1 solenoid (a), spool is spring offset (2 position, end to middle)

(4) Code reserved for option and variants:

b : only for version LL, ML, LM solenoid b installed (instead of solenoid a)

S : serial connection

ZT : body, solenoid tubes and coils are zinc trivalent plated

CP : integrated pilot operated check valve

(5) Electric voltage and solenoid coils:

0000: no coils

012C: coils for V12DC

024C: coils for V24DC

115A: coils for 110/50-V 115/60 AC

230A: coils for V220/50-V230/60 AC

(6) Design number (progressive) of the valves

Spools, spring and solenoids combination permit to obtain almost every type of ports (P, A, B, T) connection and sequence.

For almost all types of solenoids/springs combination and for all type of spools (with the exception of spool 4), when solenoid "a" is energized, hydraulic connections are P-> B and A->T ; to obtain P->A and B->T solenoid "b" must be energized. The hydraulic connections that are obtained in the "central" (neutral) position when solenoids are not energized is the characteristic mark of the spool shape and from it derives its identification number:

0 = P, A, B, T connected

1 = P, A, B, T closed

3 = P closed, A, B, T connected.

For other types see 4

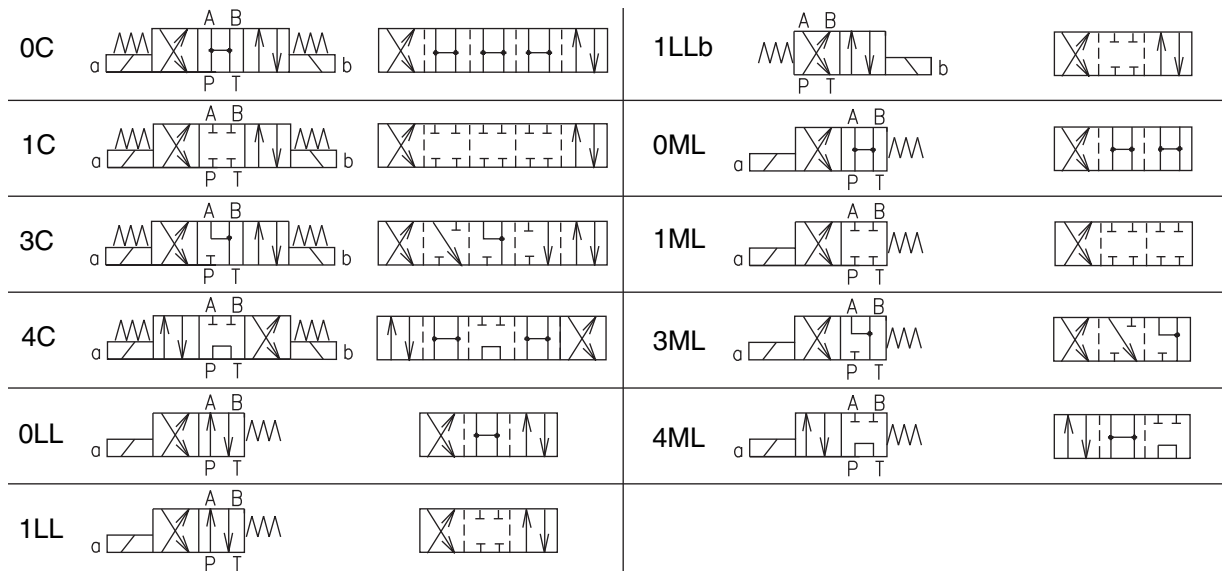

3 TECHNICAL DATA

Maximum nominal flow	40 l/min
Maximum rec. flow rate	50 l/min
Maximum nominal pressure (P, A, B)	32 MPa (320 bar)
Maximum pressure at T port	21 MPa (210 bar)
Pressure drops	see [5]
Protection to DIN 40050	IP 65
Duty cycle	100%
Service life	$\geq 10^7$ cycles
Installation and dimensions	see [7]
Mass	1,04 - 0,9 Kg

Electric characteristics:

Valve type HDFH-ES-* are operated by solenoid that are energized :
 Directly from a D.C. voltage supply:
 V 12 DC = 012C V 24 DC = 024C
 By the use of coils that incorporate a full wave bridge rectifier, from A.C. voltage supply:
 V 110/50 - V 115/60 = 115A
 V 220/50 - V 230/60 = 230A
 Other available voltages are : 014C ; 048C ; 060C ; 102C ; 205C ;
 and V24/50 = 024A
 All connectors must conform to ISO 4400 (DIN 43650) and electric circuitry must be able to carry the following rated current values :
 V 12 DC = 2,4 A V 115/50 = 0,26 A
 V 24 DC = 1,2 A V 230/50 = 0,14 A
 Coils with 2 electric pins, conforming with AMP connectors, are only available for DC supply (example of code : B02-012C AMP)).
 Permissible supply voltage variation : $\pm 10\%$

DIRECTIONAL CONTROL VALVES SOLENOID OPERATED

HD2-EI-*

25 l/min - 32 MPa (320 bar)

1 DESCRIPTION

Valves HD2-EI are directional control valve with subplate mounting interface acc. to ISO 4401, DIN 24340 (CETOP 02).

The design of the body is a three chamber casting for production cost saving and low pressure drops.

The valve is available with interchangeable plastic DC solenoids, also for AC power supply using connectors with a built-in rectifier bridge.

In the standard version, the valve housing is phosphated for 240 h salt spray protection acc. to ISO 9227. Enhanced surface protection for mobile sector available (ISO 9227, 520 h salt spray).

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)
HD2	-	EI	-	-	/ 10

(1) HD2: 4-way directional control valve CETOP 02

- ①= all spool: P -> A/B and A/B -> T
- ②= spool 4: P -> A/B and P->T

6 OPTIONS

OPTION S CALIBRATED ORIFICE ON P PORT

Option "S" is represented by elements ②, suitably shaped to be inserted on P port of the solenoid valve, having a calibrated orifice (of various sizes) able to restrict, at the requested Δp value, the flow rate entering the solenoid valve.

Those elements have the following orifice diameter:

- 2S - 08 -> D=0,8 mm
- 2S - 10 -> D=1 mm
- 2S - 12 -> D=1,2 mm
- 2S - 15 -> D=1.5 mm

and are kept sealed on the P port of the valve by an OR ① of 7,65x1,78 mm sizes (example OR 107-2031).

7 INSTALLATION DIMENSIONS (mm)

All valves HD2-* conform with ISO and CETOP specifications for mounting surface dimensions and for valves height. When assembled to its mounting plate valve HD2 - * must be fastened with 4 bolts M5x35 (or M5x** according to the number of modules) tightened at 8 Nm torque. Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals of QUAD/O Ring type 7,65x1,68x1,68. Connections to the electric supply is made by standard 3-PIN connectors, according to ISO 4400 (DIN 43650). Connectors can be with different cable exit size (PG9, PG11) and beside of the plain connecting function they may incorporate various features like:

- signal led
- bridge rectifier for AC supply
- voltage surge suppressor, etc.

8 HYDRAULIC FLUIDS

Seals and materials used on standard valves HD2-* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

DIRECTIONAL CONTROL VALVES SOLENOID OPERATED

HD2-ES-*

30 l/min - 32 MPa (320 bar)

1 DESCRIPTION

Valves HD2-ES are directional control valve with subplate mounting interface acc. to ISO 4401, DIN 24340 (CETOP 02).

The design of the body is a three chamber casting for production cost saving and low pressure drops.

The valve is available with interchangeable metallic DC solenoids, also for AC power supply using coils with a built-in rectifier bridge.

In the standard version, the valve housing is phosphated for 240 h salt spray protection acc. to ISO 9227. Enhanced surface protection for mobile sector available (ISO 9227, 520 h salt spray).

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)
HD2	-	ES	-	-	/ 11

(1) HD2: 4-way directional control valve CETOP 02- Pressure 32 MPa (320 bar)

(2) ES: electrically controlled standard

(3) Spool type (see 4)

-number is the main spool type

-letter is solenoid and spring arrangement:

C: 2 solenoids, spool is spring centered (3 position)

N: 2 solenoids, spool is detented (2 position)

LL: 1 solenoid (a), spool is spring offset (2 position, end to end)

ML: 1 solenoid (a), spool is spring offset (2 position, middle to end)

- ①=all spool P -> A/B and A/B -> T ; P -> T spool 4 and 0
 ②= P -> A/B spool 4 ; A/B -> T spool 4

6 HYDRAULIC LIMITS OF USE

P/Q characteristic limits for safe use of HD2-ES-* solenoid operated valves. Limit curves apply to solenoid valves energized with rated voltage - 5% and flushed with hydraulic fluid with properties according to 8.

- ①= HD2 - ES - 0C; - 1C; - 1N; - 3C; - 8C; - 0ML; - 1LL; - 1ML; - 3ML; - 8ML
 ②= HD2 - ES - 2N; - 7C
 ③= HD2 - ES - 0LL
 ④ = HD2 - ES - 4C; - 4ML
 ⑤ = HD2 - ES - 55C; - 2LL

7 INSTALLATION DIMENSIONS (mm)

All valves HD2-* conform with ISO and CETOP specifications for mounting surface dimensions (see 6) and for valves height. When assembled to its mounting plate valve HD2 - * must be fastened with 4 bolts M5x35 (or M5x** according to the number of modules) tightened at 8 Nm torque.

Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals of QUAD/ O Ring type 7,65x1,68x1,68. Solenoid valves can be supplied without electric coils, as HD2 - ES -**-0000 - .

Coils are supplied separately: standard, 3 electric pins coils are BO2-012C, BO2-024C, BO2-115A and BO2-230A.

Connectors to the electric supply is made:

a) On standard solenoid coils by standard 3-PIN connectors according to ISO 4400 (DIN 43650).

Connectors can be with different cable exit size (PG9, PG11) and beside of the plain connecting function they may incorporate various features like

- signal led
- voltage surge suppressor, etc.

b) On type "AMP" solenoid coils, by connectors conforming to AMP-Timer (see 11)

8 HYDRAULIC FLUIDS

Seals and materials used on standard valves HD2-* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and filtered to ISO 4406 class 19/17/14 or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

9 VERSION "K": EXTENDED EMERGENCY PIN

Solenoid valves according to "K" version have extended emergency actuator pins protruding from the solenoid shape, that permit a quick and easy "Hand operation" of the valves, without the need of any tool. The actuator pin and the end of the solenoid are protected by a flexible rubber cap that makes easy operation and protects from moisture and water splashes.

10 VERSION "S*": CALIBRATED ORIFICE ON P PORT

Option "S" is represented by elements ②, suitably shaped to be inserted on P port of the solenoid valve, having a calibrated orifice (of various size) able to restrict, at the requested Δp value, the flow rate entering the solenoid valve. Those elements have the following orifice diameter:

2S - 08 D = 0,8 mm

2S - 10 D = 1

2S - 12 D = 1,2 mm

2S - 15 D = 1,5 mm

and are kept sealed on the P port of the valve by an OR ① of 7,65x1,78 mm sizes (example OR 107-2031)

11 VERSION "AMP" and VERSION "Deutsch":

They are typically used on DC mobile application and they are available for many different coltages voltages:

12 VERSION "ZC" and VERSION "ZN" ZINC PLATED VALVES

Solenoid valves according to "ZC" version are completely zinc plated and protected against every type of corrosion due to saline ambience or other aggressive chemicals. Zinc thickness are:

on the valve body 10-15 μm

on the solenoid tubes 8-12 μm

on the solenoid coils 8-12 μm

Version ZN (Zinc Nichel) has an higher protection degree which achieve the ISO 9227, 720 h salt spray test requirements

DIRECTIONAL CONTROL VALVES LEVER OPERATED HD2-LO-*

30 l/min - 32 MPa (320 bar)

1 DESCRIPTION

The hand operated directional control valves are used mainly to control start, stop and direction of fluid. Manual lever and actuating section can be rotated in 90° increments for flexible installation. The directional control valves are being manufactured as two-position and three-position valves (see table with functional symbols). In the standard version, the valve housing is phosphated and steel parts zinc-coated for 240 h salt spray protection acc. to ISO 9227. Enhanced surface protection for mobile sector available (ISO 9227, 520 h salt spray).

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)
HD2	-	LO	-	-	/ 10

(1) HD2: 4-way directional control valve CETOP 02- Pressure 32 MPa (320bar)

(2) LO: standard lever operated

(3) Spool type (see 4)

-number is the main spool type

-letter is lever and spring arrangement:

C: spool is spring centered (3 position)

D: spool is detented (3 position)

N: spool is detented (2 position, end to end)

LL: spool is spring offset (2 position, end to end)

ML: spool is spring offset (2 position, middle to end)

(4) Code reserved for option and variants:

b: level mechanism on B port side only for version LL, ML

(5) Code reserved for special variants

(6) Design number (progressive) of the valves

The hydraulic connections that are obtained in the "central" (neutral) position is the characteristic mark of the spool shape and from it derives its identification number: 0 = P,A,B,T connected 1 = P,A,B,T closed 3 = P closed, A,B,T connected for other types see All standard valves have the lever mechanism on the side of port "A". All 2 position, spring offset, standard valves are operated by pulling the lever. All 3 position standard valves have a +/15° angle stroke of the lever. Average effort required on the lever to operate the valve: less than 50 N. Other spool/spring/detent/lever position combinations are possible and they are indicated by a xxx 3 digits code.

3 TECHNICAL DATA

3 TECHNICAL DATA

Maximum nominal flow	32 l/min	Control of the flow: The control is made by throttling through variable orifices obtained on sleeve and partially obstructed by throttling axis. Depending on the various sleeve/axis combination, the control adjustment is: - (standard) : orifices area is reduced from 100% (*) to 0% with 6 complete turns of the adjustment screw. W (fine and sensitive): from 100% (*) to 0% with 8 complete turns - special variant (*) 100% approx: Q=0.5 dm ³ /s (30 l/min) at Δp=1MPa (10 bar) The axis is shifted to increase throttling by unlocking its nut and turning clock wise the adjustment screw. Suitable mechanical stops prevent dangerous manoeuvring.
Maximum rec. flow rate	0,5 dm ³ /s (30 l/min)	
maximum nominal pressure	32 MPa (320 bar)	
Pressure drops	see 4	
Installation and dimensions	see 5	
Mass	approx 0,8 kg	

4 TYPICAL DIAGRAMS

Typical Δp-Q curves for valves AM2-FO-* in standard configuration, with mineral oil at 36 cSt and at 50° C with throttling axis at full retraction

5 INSTALLATION DIMENSIONS (mm)

6 HYDRAULIC FLUIDS

Seals and materials used on standard valves AM2-* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidantizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

All stackable valves AM2-FO conform with ISO and CETOP specifications for mounting surface dimensions (see also front page). Valves height 35 mm. Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals of OR type. All valves have on their "mounting" surface a ø 4 mm cylindrical hole and are equipped on their "seals" surface by a ø 3 mm locating pin, to conform with the norms. In case of necessity, the pin can be easily removed.

STACKABLE VALVES FLOW CONTROL

AM2-FC-*

30 l/min - 32 MPa (320 bar)

1 DESCRIPTION

Stackable valve CETOP 2 with meter out control (referred to the hydraulic actuator). It is possible to control the lines A, B or AB simply turning the side screws.

On demand it is possible to have also the fine control option.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)
AM2	-	FC	-	-	/ 10

- (1) AM2: stackable valve CETOP 02- Pressure 32 MPa (320 bar)
- (2) FC: one-way flow control valves with meter-out control (referred to the hydraulic actuator)
- (3) Service lines where the controls operate:
 - AB : controls on A and B. Fluid flows unrestricted A -> A1, and flow is controlled from A1 -> A and B1 -> B
 - A : flow is controlled from A1 -> A; free on B, P and T
 - B : flow is controlled from B1 -> B; free on A, P and T
- (4) Flow control characteristics for A1 -> A and B1 -> B and check valve opening pressure (Pm) for flow A -> A1 and B -> B1
 - no designation: standard control and Pm approx 0.04 MPa (0.4 bar)
 - W : fine and sensitive control
 - 4 : Pm approx 0.4 MPa (4 bar)
- (5) Code reserved for special variants (materials, seals, surface treatments etc.).
- (6) Design number (progressive) of the valves

Fluid flows freely on P and T lines; on service lines A and/or B with controls, fluid flows from A -> A1 (and/or B ->B1) overcoming the force of spring acting on sleeve; fluid flows from A1 ->A (and/or B1 ->B) through orifices of sleeve which is pushed against its seat; the throttling axis, which is shifted by screwing it and locked by its nut, partially obstructs the control orifices, thus making the flow rate entirely dependent upon the available pressure drop.

3 TECHNICAL DATA

Maximum rec. flow rate	30 l/min
Maximum nominal pressure	32 MPa (320 bar)
Pressure drops	see 5
Installation and dimensions	see 6
Mass	approx 0,5 kg

4 HYDRAULIC FLUIDS

Seals and materials used on standard valves AM2-* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidantizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

5 TYPICAL DIAGRAMS

Typical Δp -Q curves for valves AM2-CO-/20 in standard configuration, with mineral oil at 36 cSt and at 50°C

6 INSTALLATION DIMENSIONS (mm)

All stackable valves AM2-CO-*/20 conform with ISO and CETOP specifications for mounting surface dimensions. Valves height 30 mm. Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals. All valves have on their "mounting" surface a ϕ 4 mm cylindrical hole and have on their "seals" surface a ϕ 3 mm cylindrical hole, conform with ISO and CETOP norms.

STACKABLE PILOT OPERATED CHECK VALVES

AM2-CP-*

30 l/min - 32 MPa (320 bar)

1 DESCRIPTION

Pilot operated check valve. All the internal part are made with high strenght steel and are machined with accuracy in order to assure the requested tightness. The controlled lines are A, B or AB. The standard surafce treatment of the body is phosphate coated. Plugs are zinc coated.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)
AM2	- CP	-	-	-	/ 10

- (1) AM2: stackable valve CETOP 02 - Pressure 32 MPa (320 bar)
- (2) CP: check valve, pilot operated (hydraulically)
- (3) Service lines where the controls operate:
 - AB: pilot operated checks on A and B. Fluid flows A -> A1 and B -> B1 and flow A1 -> A (or B1 -> B) is permitted only when B (or A) is pressurized
 - A : pilot operated check on A; flow A1 -> A is permitted only when B is pressurized
 - B : pilot operated check on B; flow B1 -> B is permitted only when A is pressurized
- (4) Check valve opening (cracking) pressure (Pm) for free flow A -> A1 and B -> B1
no designation: Pm approx 0.2 MPa (2 bar)
4: Pm approx 0.4 MPa (4 bar)
- (5) Code reserved for special variants (materials, seals, surface treatments, etc.)
- (6) Design number (progressive) of the valves.

AM2-CP-AB

AM2-CP-B

AM2-CP-A

Fluid flows freely on P and T lines; on service lines A and/or B with p.o. check, fluid flows from A -> A1 (and/or B -> B1) overcoming the force of spring 1 acting on poppet 2, and fluid is blocked from A1 -> A (and/or B1 -> B). When, by switching the solenoid operated 4-way directional valve, pressure is made available at, for instance, port B fluid flows B -> B1 and the pilot piston 3, shifting from its central position, forces poppet 2, on service line A, to open and permit flow A1 -> A.

3 TECHNICAL DATA

Maximum rec. flow rate	30 l/min	Piloting pressure: To shift the pilot piston and to open the check in A the piloting pressure must be at B: $P_p = P_b = \frac{P_{a1} + P_m - P_a}{3,5} + P_a$ where: Pp = piloting pressure; Pb = pressure in B; Pa = pressure in A; Pa1 = pressure in A1; Pm = check valve opening pressure (spring) or: to open the check in B: $P_p = P_a = \frac{P_{b1} + P_m - P_b}{3,5} + P_b$
Maximum nominal pressure	32 MPa (320 bar)	
Pressure drops	see 4	
Pilot area ratio piston/check valve	approx 3,5	
Installation and dimensions	see 5	
Mass	approx 0,5 kg	

4 TYPICAL DIAGRAMS

- ① A -> A1
B -> B1
- ② A1 -> A
B1 -> B

6 HYDRAULIC FLUIDS

Seals and materials used on standard valves AM2-* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

5 INSTALLATION DIMENSIONS (mm)

All stackable valves AM2-CP-* conform with ISO and CETOP specifications for mounting surface dimensions (see also front page). Valves height 35 mm. Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals of OR type. All valves have on their "mounting" surface a $\varnothing 4$ mm cylindrical hole and have on their "seals" surface a $\varnothing 3$ mm cylindrical hole, conform with ISO and CETOP norms.

STACKABLE PRESSURE RELIEF VALVES

AM2-MO-*

20 l/min - 32 MPa (320 bar)

1 DESCRIPTION

Stackable pressure relief valve direct operated. The valve is made with a steel body combined with a pressure relief cartridge valve with an anti vibration system.

The body of the valve is phosphate coated. The cartridge valve is zinc coated. The pressure can be set in different pressure ranges.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)	(7)
AM2	- MO	-	/	-	-	/ 10

(1) AM2 : stackable valve CETOP 02 - Pressure 32 MPa (320 bar)

(2) MO : pressure relief, direct acting

(3) Service lines where the controls operate:

P : relief on P and discharge to T

B : relief on B and discharge to T

BA: independent relief on B and on A and discharge to T

(4) Pressure adjustment ranges:

10: from 6,3 MPa to 12,5 MPa (from 63 to 125 bar)

20: from 8 MPa to 21 MPa (from 80 to 210 bar)

32: from 12,5 MPa to 35 MPa (from 125 to 350 bar)

(5) Pressure adjustment range for relief on A (only for models AM2-MO-BA)

(6) Code reserved for special variants (materials, seals, surface treatments, etc.)

(7) Design number (progressive) of the valves.

AM2-MO-P

AM2-MO-BA

AM2-MO-B

Fluid flows freely on A, B, P and T lines; when on service line, protected by the relief valve, the pressure exceeds the settled value, the piston 1 is pushed by axial hydraulic force, overcomes the force of spring 2, and shifts in its cylindrical seat and opens to the pressurized fluid annular passage to T, thus keeping the pressure level at the requested value.

3 TECHNICAL DATA

Maximum rec. flow rate	20 l/min	Adjustment of the relief pressure: Relief pressure is reached when the axial hydraulic forces on piston equal the force of spring; the value of the relief pressure can be therefore changed, within the limits of the chosen adjustment range, by changing the compression of spring. To increase the relief pressure, turn clock wise the adjustment screw, after having unlocked its nut. For each pressure adjustment range, the pressure gradient is approx: 10 : 1,6 MPa/mm (16 bar/turn) 20 : 2,6 MPa/mm (26 bar/turn) 32 : 5 MPa/mm (50 bar/turn) When the required level of pressure is reached, lock the nut.
Maximum nominal pressure	32 MPa (320 bar)	
Pressure relief curves	see 4	
Installation and dimensions	see 5	
Masses:		
AM2-MO-P or -B	approx 0,85 kg	
AM2-MO-BA	approx 1 kg	

4 TYPICAL DIAGRAMS

Typical curves for valves AM2-MO-* in standard configuration, with mineral oil at 36 cSt and at 50°C.

5 INSTALLATION DIMENSIONS (mm)

6 HYDRAULIC FLUIDS

Seals and materials used on standard valves AM2-* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidantizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

All stackable valves AM2-MO-* conform with ISO and CETOP specifications for mounting surface dimensions (see also front page). Valves height 35 mm. Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals of OR type. All valves have on their "mounting" surface a ϕ 4 mm cylindrical hole and have on their "seals" surface a ϕ 3 mm cylindrical hole, conform with ISO and CETOP norms.

MODULAR VALVES PRESSURE REDUCING

AM2-RO-*

30 l/min - 32 MPa (320 bar)

1 DESCRIPTION

Stackable pressure reducing valve direct operated. The valve is made with a steel body combined with a pressure relief cartridge valve. The body of the valve is phosphate coated. The cartridge valve is zinc coated. The pressure can be set in different pressure ranges.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)		
AM2	-	RO	-	/	-	/	20

(1) AM2 : stackable valve CETOP 02 - Pressure 32 MPa (320 bar)

(2) RO : pressure reducing, direct operated- 3 way valve

(3) Service lines where the controls operate:

P : control on P with 3rd way and drain to T line

AC: control on A with check valve

B : control on P with pressure reduced on B

(4) Controlled pressure adjustment ranges:

2,5: from 0,4 MPa to 3,2 MPa (from 4 to 32 bar)

6,3: from 0,5 MPa to 8 MPa (from 5 to 80 bar)

16: from 1 MPa to 20 MPa (from 10 to 200 bar)

20: from 2,5 MPa to 25 MPa (from 25 to 250 bar)

(5) Code reserved for special variants (materials, seals, surface treatments, etc.)

V= adjustment hand knob

(6) Design number (progressive) of the valves.

AM2-RO-P

AM2-RO-B

AM2-RO-AC

Reduced pressure is obtained by throttling the flow on spool 2 which is balanced, on one side, by the reduced pressure and, on the other side, by the spring. All valves AM2-RO-* are 3 way, direct operated: If the pressure in the regulated chamber overcomes the value of the adjusted, reduced pressure, the valve discharges to T (at pressure value higher than the reduced pressure, see diagrams) thus acting as safety or relief valve.

3 TECHNICAL DATA

Maximum rec. flow rate on free lines	30 l/min	Adjustment of the pressure: The value of the reduced pressure, is changing the compression of spring. To increase the value of the reduced pressure, unlock nut ch. 13 and turn clockwise the screw with outside hex 4.
on controlled lines	20 l/min	
Maximum nominal pressure	32 MPa (320 bar)	
Maximum pressure on T	10 MPa (100 bar)	
Pressure curves	see 4	Valve reducing pressure on A or B lines can be: - indirect (type AM2-RO-B) they act on P line, receive reduced pressure pilot signal from B line that is controlled; (eventual pressurized reverse flow is directed to T by 3 ^a way). - with integral check valve (type AM2-RO-AC) they act on A line and they allow free reverse flow to port A of the solenoid valve. (see P).
Installation and dimensions	see 5	
Masses:		
AM2-RO-P or -B	approx 0,6 kg	
AM2-RO-AC	approx 0,8 kg	

4 TYPICAL DIAGRAMS

DIRECTIONAL CONTROL VALVES SOLENOID OPERATED

HD3-ES-*/10

80 l/min - 35 MPa (350 bar)

1 DESCRIPTION

Valves HD3-ES are directional control valve with subplate mounting interface acc. to ISO 4401, DIN 24340 (CETOP 03).

The design of the body is a quality five chamber casting.

The valve is available with interchangeable metallic DC solenoids, also for AC power supply using a built-in rectifier bridge inside the coil.

In the standard version, the valve housing is phosphated for 240 h salt spray protection acc. to ISO 9227. Enhanced surface protection for mobile sector available (ISO 9227, 520 h salt spray).

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)	(7)
HD3	-	ES	-	-	-	/ 10

(1) HD3: 4-way directional control valve CETOP 03

(2) ES: Electrically controlled

(3) Spool type (see 4):

-number is the main spool type

-letter is the solenoid or spring arrangement:

C : 2 solenoids, spool is spring centered (3 position)

LL : 1 solenoid, spool is spring offset (2 position)

ML : 1 solenoid, spool is spring centered (2 position)

N : 2 solenoids, spool is detented see 13 (2 position)

(4) Code reserved for option and variants:

S-**: calibrated orifice on P port, see 11

K : water proof caps on emergency pin, see 10

T : soft shifting device, see 12

Z* : anti corrosion coating (variants), see 14

Sa, Sb: proximity sensors, see 15

(5) Electric voltage and solenoid coils: see 8

0000: no coils

012C: coils for V12DC

024C: coils for V24DC

048C: coils for V48DC

024A: coils for V24/50AC

115A: coils for V110/50- V 115/60AC

230A: coils for V220/50- V 230/60AC

(6) Coil connection (see 16):

no designation: DIN 43650-A ISO 4400

AMP: Amp Junior Timer- vertical configuration

AMPX: Amp Junior Timer- axial configuration

D: Deutsch

(7) Design number (progressive) of the valves

The spool 5 shifts into the valve body 1 subject to the action of springs 4 and solenoids 2. Spool 5, depending from its shape and its position in the valve body, opens and/ or closes passages between P, A, B and T ports, thus controlling the direction of the hydraulic flow.

3 TECHNICAL DATA

Nominal flow	60 l/min	Electric characteristics: Valve type HD3-ES-* are operated by solenoid that are energized : Directly from a D.C. voltage supply: V 12 DC = 012 C V 24 DC = 024C By the use of coils that incorporate a full wave bridge rectifier, from A.C. voltage supply: V 110/50 - V 115/60 = 115A V 220/50 - V 230/60 = 230A Other available voltages are : 014C ; 048C ; 060C ; 102C ; 205C ; and V24/50 = 024A All connectors must conform to ISO 4400 (DIN 43650) and electric circuitry must be able to carry the following rated current values : V 12 DC = 2,4A V 115/50 = 0,26A V 24 DC = 1,2A V 230/50 = 0,14A Coils with 2 electric pins, conforming with AMP connectors or Deutsch connectors, are only available for DC supply (example of code: B03.012C AMPX or B03.012C D). Permissible supply voltage variation : ± 10 %
Maximum rec. flow rate	80 l/min	
Maximum nominal pressure (P, A, B)	35 MPa (350 bar)	
Maximum pressure at T port	21 MPa (210 bar)	
Pressure drops	see [5]	
Protection to DIN 40050	IP 65	
Duty cycle	100%	
Installation and dimensions	see [6]	
Mass	2,1/1,6 kg

8 SOLENOID

Solenoid valves can be supplied without electric coils, as HD3-ES-***-0000. Coils are supplied separately; standard, 3 electric pins, coils are : - B03.012C ; B03.024C ; B03.115A ; B03.230A Connections to the electric supply is made by standard 3-PIN connectors, according to ISO 4400 (DIN 43650). Connectors can be with different cable exit size (PG9, PG11) and beside of the plain connecting function they may incorporate various features like: Signal led, Voltage surge suppressor, etc. (see 18)

6 INSTALLATION DIMENSIONS (mm)

All valves HD3-* conform with ISO and CETOP specifications for mounting surface dimensions (see 9) and for valves height. When assembled to its mounting plate valve HD3-* must be fastened with 4 bolts M5x45 (or M5x** according to the number of modules) tightened at 8 Nm torque. Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals of Quad Ring type 9,25x1,68x1,68.

9 HYDRAULIC FLUID

Seals and materials used on standard valves HD3-* are fully compatible with hydraulics fluids of mineral base, upgraded with antifoaming and anti oxidizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

10 VERSION "K": OVERRIDE PIN

Solenoid valves according to "K" version have extended emergency actuator pins protruding from the solenoid shape, that permit a quick and easy "hand operation" of the valves, without the need of any tool. The actuator pin and the end of the solenoid are protected by a flexible rubber cap that makes easy operation and protects from moisture and water splashes

11 VERSION "S*"; CALIBRATED ORIFICE ON P PORT

Option "S*" is represented by an element suitably shaped to be inserted on P port of the solenoid valve, having a calibrated orifice (of various sizes) able to restrict, depending on the ΔP value, the flow rate entering the solenoid valve.

Those elements have the following orifice diameters :

- 3S-00 -> D = 0 mm
- 3S-10 -> D = 1,0 mm
- 3S-15 -> D = 1,5 mm
- 3S-20 -> D = 2,0 mm
- 3S-25 -> D = 2,5 mm

and are kept sealed on the P port of the valve by an OR of 9,25x1,78 mm sizes (example OR 110-2037)

12 VERSION "T": SOFT SHIFTING

Solenoid valves with "soft shifting" devices are 2 or 3 positions valves controlled by solenoids which incorporate calibrated orifices in the armature plungers. The hydraulic controls on the shifting speed of the plunger, and therefore of the spool in the valve's body, permit progressive transitories, thus reducing or eliminating water hammer effects in the circuit. Typically the shifting time of a "T" version solenoid valve is, when energized, in the order of 300-500 ms (versus 30-50 ms of a standard valve) provided that the armature plunger properly works in the hydraulic fluid. The appropriate conditions are given by assuring a minimum counter pressure on T line and by bleeding the air from the solenoid acting on purge's valve 1, which is accessible after removing the rubber boot 2 from the solenoid retaining nut 3.

13 VERSION "N": MECHANICAL DETENT ON SPOOL

Solenoids valves with detent typically are 2 position, 2 solenoid, no-spring valves where the spool is kept at the extreme ends of its stroke by a mechanical device. This permits that solenoids are energized by short time current pulses and the spool remains at its position regardless of forces due to hydrodynamics or gravitational/ inertial effects (vibrations).

14 VERSION "Z": ANTICORROSION OPTION

On HD3-ES-* standard valves the body is phosphate coated, the solenoid tubes are not treated and coils mantel and irons are zinc trivalent plated. To increase the resistance to corrosive agents different variants are available :

Example of ZK painted : HD3-ES-3C-ZK-024C/10

ZT: Body, solenoid tubes and coils irons are zinc trivalent plated

ZL: Body is coated with special TEMADUR 20 zinc painting

Solenoids have 8-12 μm zinc plating

ZK: Body is coated with special TEMADUR 20 zinc painting

Solenoids tube and coils irons are "zinc-nickel" plated

15 VERSION "Sa and Sb": POSITION SENSOR

Solenoid valves with spool position sensors are equipped with a proximity sensor able to transform the spool position into an electric signal. It can be used with directional control valves with one or two solenoids. It's possible to have the two different versions, normally open and normally closed sensor. This option is mandatory in "safe" application, where an electric signal of positive valves spool (displacement) position is needed

Technical data of the Sensor

Supply Voltage	24 V DC
Supply voltage range	10..30 V DC
Rated current	200 mA
Protection	IP67
Max. operating Pressure	50 bar (standard) - 210 bar (optional)
Indication	yellow led

D = Deutsch
B03-0xxD

17 QUENCHING DIODE

On request, DC coils can be supplied with an integrated bidirectional quenching diode (transil type BZW06-19B) able to provide high overvoltage protection. Their instantaneous response to transient overvoltages makes them particularly suited to protect voltage sensitive devices

18 CONNECTORS FOR ISO 4400 (DIN 43650) series KA132

Connectors are available for coils with ISO 4400 (DIN 43650) connection. Most common configuration are: Standard, simple, 3 pin connectors:

- KA132000B9 = black with PG9
- KA132000B1 = black with PG11
- KA132000A1 = grey with PG11
- KA132L34T9 = transparent with led indication
- KA132T54T9 = transparent with led indication and diode transil for protection against overvoltages

For more details and models see aidro table KA-132

DIRECTIONAL CONTROL VALVES SOLENOID OPERATED

HD3-ES-*/-20

60 l/min - 32 MPa (320 bar)

1 DESCRIPTION

Valves HD3-ES are directional control valve with subplate mounting interface acc. to ISO 4401, DIN 24340 (CETOP 03).

The design of the body is a high quality five chamber casting.

The valve is available with interchangeable metallic DC solenoids, also for AC power supply using a built-in rectifier bridge inside the coil.

In the standard version, the valve housing is phosphated for 240 h salt spray protection acc. to ISO 9227. Enhanced surface protection for mobile sector available (ISO 9227, 520 h salt spray).

2 ORDERING CODE

DIRECTIONAL CONTROL VALVES SOLENOID OPERATED

HD33-EF-*

40 l/min - 25 MPa (250 bar)

1 DESCRIPTION

Valves HD33-EF are directional control valve with subplate mounting interface acc. to ISO 4401, DIN 24340 (CETOP 03).

The design of the body is a three chamber casting for production cost saving and low pressure drops. HD33-EF has a low power consumption (18 W) and a compact design.

The valve is available with interchangeable metallic DC solenoids, also for AC power supply using connectors with a built-in rectifier bridge.

In the standard version, the valve housing is phosphated for 240 h salt spray protection acc. to ISO 9227. Enhanced surface protection for mobile sector available (ISO 9227, 520 h salt spray).

Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals of O Ring type 9,25x1,78

10 MANUAL OVERRIDE

In case of electric cut-offs, the spool can be manually shifted by acting on the emergency pins, located at the end of the solenoids and accessible through the retaining nuts.

Standard model of the manual override

DIRECTIONAL CONTROL VALVES LEVER OPERATED

HD3-LO-*

60 l/min - 32 MPa (320 bar)

1 DESCRIPTION

The hand operated directional control valves are used mainly to control start, stop and direction of fluid. Manual lever and actuating section can be rotated in 90° increments for flexible installation. The directional control valves are being manufactured as two-position and three-position valves (see table with functional symbols). In the standard version, the valve housing is phosphated and steel parts zinc-coated for 240 h salt spray protection acc. to ISO 9227. Enhanced surface protection for mobile sector available (ISO 9227, 520 h salt spray).

Maximum nominal flow		Control of the flow:
Maximum rec. flow rate	60 l/min	The control is made by throttling from through variable orifices obtained on sleeve and partially obstructed by throttling axis. Depending on the various sleeve/axis combination, the control adjustment is:
Maximum nominal pressure	32 MPa (320 bar)	- (standard): orifices area is reduced from 100% (*) to 0% with 6 complete turns of the adjustment screw.
Pressure drops	see [4]	- V (fine): from 100% (**) to 0% with 5 complete turns of the adjustment screw.
Installation and dimensions	see [5]	(*) 100% approx Q=60 l/min at p=20 bar
Mass	approx 1,2 kg	(**) 100% approx Q=30 l/min at p=20 bar
		The axis is shifted to increase throttling by unlocking its nut and turning clock wise the adjustment screw.
		Suitable mechanical stops prevent dangerous manoeuvring.

4 TYPICAL DIAGRAMS

Typical Δp -Q curves for valves AM3-FO-* in standard configuration, with mineral oil at 36 cSt and at 50°C with throttling axis at full retraction.

① controlled channels ③ controlled channels

5 INSTALLATION DIMENSIONS (mm)

6 HYDRAULIC FLUIDS

Seals and materials used on standard valves AM3-* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidantizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

All stackable valves AM3-FO-* conform with ISO and CETOP specifications for mounting surface dimensions. Valves height 40 mm.

Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals of OR type. All valves have on their "mounting" surface a ϕ 4 mm cylindrical hole and have on their "seals" surface a ϕ 3 mm cylindrical hole, conform with ISO and CETOP norms.

FLOW CONTROL VALVES

AM3-FC-*

60 l/min - 32 MPa (320 bar)

1 DESCRIPTION

Stackable valve CETOP 3 with meter out control (referred to the hydraulic actuator). It is possible to control the lines A, B or AB simply turning the side screws.

On demand it is possible to have also the fine control option.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)
AM3	-	FC	-	-	/ 10

(1) AM3: stackable valve CETOP 03 - Pressure 32 MPa (320 bar)

(2) FC: one way flow control valves with meter-out control (referred to the hydraulic actuator)

(3) Service lines where the controls operate:

- AB: controls on A and B. Fluid flows unrestricted from A <-> A1 and flow is controlled from A1 -> A and B1 -> B
- A : flow is controlled from A1 <-> A, free on B
- B : flow is controlled from B1 <-> B; free on A

(4) Flow control characteristics for A1 -> A and B1 -> B) and check valve opening pressure (Pm) for flow A ->A1 and B -> B1

- no designation: standard control and Pm approx 0,04 MPa (0,4 bar)

(2) CP: check valve. spring operated (hydraulically)

(3) Service lines where the controls operate:

AB: pilot operated checks on A and B, fluids flows A -> A1 and B -> B1 and flow A1 -> A (or B1 -> B) is permitted only when B (or A) is pressurized

A : pilot operated check on A; flow A1 -> A is permitted only when B is pressurized

B : pilot operated check on B; flow B1 -> B is permitted only when A is pressurized

(4) check valve opening (cracking) pressure (Pm)

for free flow A->A1 and B->B1:

no designation (standard): Pm approx 0.2 MPa (2 bar)

4: Pm approx 0.4 MPa (4 bar)

(5) Code reserved for option and variants

(6) Design number (progressive) of the valves

AM3-CP-A

AM3-CP-AB

AM3-CP-B

Fluid flows freely on P and T lines;

On service lines A and/or B with p.o. check, fluid flows from A ->A1 (and/ or B ->B1) overcoming the force of spring 5 acting on poppet 4, and fluid is blocked from A1 ->A (and/or B1 -> B). When, by switching the solenoid operated 4-way directional valve, pressure is made available at, for instance, port B fluid flows B -> B1 and the pilot piston 3, shifting from its central position, forces poppet 2, on service line A, to open and permit flow A1 -> A.

3 TECHNICAL DATA

Maximum nominal flow		Piloting pressure:
Maximum rec. flow rate	60 l/min	To shift the pilot piston and to open the check in A the piloting pressure must be at B:
Maximum nominal pressure	32 MPa (320 bar)	$P_p = P_b = \frac{P_{a1} + P_m - P_a + P_a}{3,5}$
Pressure drops	see 4	where: P _p = piloting pressure
Pilot area ration piston/check valve	approx 3,5	P _b = pressure in B
Installation and dimensions	see 5	P _a = pressure in A
Mass	approx 1 kg	P _{a1} = pressure in A
		P _m = check valve opening pressure (spring)
		or to open the check in B
		$P_p = P_a = \frac{P_{b1} + P_m - P_b}{3,5} + P_b$

4 TYPICAL DIAGRAMS

 B->B1 B1->B T<->T

6 HYDRAULIC FLUIDS

Seals and materials used on standard valves AM3 - * are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidantizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

5 INSTALLATION DIMENSIONS (mm)

All stackable valves AM3-CP-*/10 conform with ISO and CETOP specifications for mounting surface dimensions. Valves height 40 mm. Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals. All valves have on their "mounting" surface a ø4 mm cylindrical hole and have on their "seals" surface a ø 3 mm cylindrical hole, conform with ISO and CETOP norms.

PRESSURE RELIEF VALVES

AM3-MO-*

60 l/min - 32 MPa (320 bar)

1 DESCRIPTION

Stackable pressure relief valve direct operated. The valve is made with a steel body combined with a pressure relief cartridge valve with an anti vibration system.

The body of the valve is phosphate coated. The cartridge valve is zinc coated. The pressure can be set in different pressure ranges.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)	(7)
AM3	-	MO	-	-	-	/ 10

(1) AM3: stackable valve CETOP 03 - Pressure 32 MPa (320 bar)

(2) MO: pressure relief, direct acting

(3) Service lines where the controls operate:

P: relief on P and discharge to T

B: relief on B and discharge to T

BA: independent relief on B and on A and discharge to T

(4) Pressure adjustment ranges:

10: from 2,5 MPa to 12,5 MPa (from 25 to 125 bar)

20: from 4 MPa to 25 MPa (from 40 to 250 bar)

AM3-MO-P

AM3-MO-B

AM3-MO-BA

3 TECHNICAL DATA

Maximum nominal flow		Adjustment of the relief pressure:
Maximum rec. flow rate on free lines	1 dm ³ /s (60 l/min)	Relief pressure is reached when the axial hydraulic forces on piston 3 equal the force of spring 5; the value of the relief pressure can be therefore changed, within the limits of the chosen adjustment range, by changing the compression of spring 5. To increase the relief pressure, turn clock wise the adjustment screw 4, after having unlocked ist nut 6. For each pressure adjustment range, the pressure gradient is approx:
On protected lines	0,5 dm ³ /s approx 32 l/min	10: 1,6 MPa/mm (24 bar/turn)
Maximum nominal pressure	32 MPa (320 bar)	20: 3,2 MPa/mm (48 bar/turn)
Pressure relief curves	see 4	32: 5 MPa/mm (75 bar/turn)
Installation and dimensions	see 5	When the required level of pressure is reached, lock the nut 6.
Masses		
AM3-MO-P or B	approx 1,7 kg	
AM3-MO-BA	approx 2,3 kg	

4 TYPICAL DIAGRAMS

Typical Δp -Q curves for valves AM3-MO-* in standard configuration, with mineral oil at 36 cSt and at 50°C

6 HYDRAULIC FLUIDS

Seals and materials used on standard valves AM3 - * are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidantizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

All stackable valves AM3-* conform with ISO and CETOP specifications for mounting surface dimensions. Valves height 40 mm. Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals of OR type. All valves have on their "mounting" surface a $\phi 4$ mm cylindrical hole and have on their "seals" surface a $\phi 3$ mm locating pin, to conform with the norms. In case of necessity, the pin can be easily removed.

5 INSTALLATION DIMENSIONS (mm)

STACKABLE VALVE RELIEF VALVE AND BYPASS

AM3-M*-EV*

60 l/min - 32 MPa (320 bar)

1 DESCRIPTION

The module acts as relief valve and solenoid by-pass valve with high performances and full CETOP 03 flows. The Pressure relief valve is a 7/8" 14 UNF valve direct operated. Optionally can be installed the pilot operated relief valve which assure a constant behavior at different flow rates. The by-pass valve is a special 3/4" 16 UNF valve with bigger nose, able to manage 50 l/min with low pressure drops.

2 ORDERING CODE

5 INSTALLATION DIMENSIONS (mm)

Example AM3-MP-EVC

6 HYDRAULIC FLUIDS

Seals and materials used on standard valves AM3-* are fully compatible with hydraulic fluids of mineral base, upgraded with antifoaming and anti oxidizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

When assembled to its mounting plate, valve AM3-M*EV must be fastened with 4 bolts M5x45 (or M5x** according to the number of modules) tightened at 8 Nm torque. Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals of O-Ring type 2037.

PRESSURE RELIEF VALVES

AM3-MP-*

60 l/min - 32 MPa (320 bar)

1 DESCRIPTION

Stackable pressure relief valve pilot operated. The valve is made with a steel body combined with a pressure relief cartridge valve pilot operated for a stable pressure control.

The body of the valve is phosphate coated. The cartridge valve is zinc coated. The pressure can be set in different pressure ranges.

2 ORDERING CODE

V= adjustment hand knob

(6) Design number (progressive) of the valves

AM3-RO-P

AM3-RO-A

AM3-RO-B

All valves AM3-RO-* are 3 way, direct operated: If the pressure in the regulated chamber overcomes the value of the adjusted, reduced pressure, the valve discharges to T (at pressure value higher then the reduced pressure- see diagrams) thus acting as safety or relief valve.

3 TECHNICAL DATA

Maximum rec. flow rate on free lines	1 d m ³ /s (60 l/min)	Adjustment of the relief pressure: Reduced pressure is obtained by throttling the flow on spool which is balanced, on one side, by the reduced pressure and, on the other side by the positioning spring. The value of the reduced pressure is changed by changing the compression of spring. To increase the value of the reduced pressure, turn clockwise the handknob or screw 3 by acting on ex. CH17 mm, after having unlocked ist nut. when the required level of pressure is reached, lock the nut.
on controlled lines	0,66 dn ³ /s (40 l/min)	
Maximum nominal pressure	32 MPa (320 bar)	For each pressure adjustment range, the pressure gradient is approx: 3,2: 0,7 MPa/turn (7 bar/turn) 6,3: 1,4 MPa/turn (14 bar/turn) 12,5: 2,5 MPa/turn (25 bar/turn) 25: 5 MPa/turn (50 bar/turn)
Maximum pressure on T	10 MPa (100 bar)	
Max drain	<1,2 cm ³ /s (0,07 l/min)	
Pressure curves	see 4	
Installation and dimensions	see 5	
Masses		
AM3-MP-BA	approx 2,3 kg	

4 TYPICAL DIAGRAMS

Typical curves for valves AM3-RO in standard configuration, with mineral oil at 36 cSt and at 50°C

5 INSTALLATION DIMENSIONS (mm)

6 HYDRAULIC FLUIDS

Seals and materials used on standard valves AM3-* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidantizing agents. The hydraulic fluid must be kept clean and filtered to ISO 406 class 19/17/14, or better, and used in a recom ended viscosity range from 10 cSt to 60 cSt.

All stackable valves AM-RO- * conform with ISO and CETOP specifications for mounting surface dimensions and for valves height 40 mm. Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals type OR 2037.

DIRECT ACTING, PRESSURE REDUCING VALVES ON B LINE

AM3-RO-BC/6,3

60 l/min - 32 MPa (320 bar)

1 DESCRIPTION

Stackable pressure reducing valve direct operated. The valve is made with a steel body combined with a pressure relief cartridge valve and with a check valve. The body of the valve is in aluminium. The cartridge valve is zinc coated. The pressure can be set in different pressure ranges.

2 ORDERING CODE

(1)	(2)	(3)	(4)
AM3	- RO	- BC	/ 6,3

- (2) RO: pressure reducing, direct operated- 3 way valve
- (3) BC: line where the control operates: B with check valve
- (4) 6,3: controlled pressure adjustment ranges (up to 6,3 MPa)

3 TECHNICAL DATA

Maximum nominal pressure	32 MPa (320 bar)	Adjustment of the regulated pressure: The pressure in B1 line can be set by acting on the adjustment element 12 (screw with internal hexagon 6 mm), after having unlocked its retaining nut 11. Turn clockwise to increase pressure at B1 port.
Maximum pressure on B line	15 MPa (150 bar)	
Maximum rec. flow on B line	20 l/min	
Maximum rec. flow on free lines	60 l/min	
Regulated pressure on B1 line	up to 6,3 MPa (63 bar)	

4 INSTALLATION DIMENSIONS (mm)

5 HYDRAULIC FLUIDS

Seals and materials used on standard valve AM3* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidantizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

All stackable valves AM3- * conform with ISO and CETOP specifications for mounting surface dimensions. Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals of OR type.

PRESSURE REDUCING MODULAR VALVES

AM3-RP-*

60 l/min - 32 MPa (320 bar)

1 DESCRIPTION

Stackable pressure reducing valve pilot operated. The valve is made with a steel body combined with a pressure relief valve. The body of the valve is phosphate coated. The cartridge valve is zinc coated. The pressure can be set in different pressure ranges.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)
AM3	- RP	-	/	-	/ 10

4 TYPICAL DIAGRAMS

Typical curves for valves AM3-RP in standard configuration, with mineral oil at 36 cSt and at 50°C

All valves AM3-RP-* are 3 way, direct operated:

If the pressure in the regulated chamber overcomes the value of the adjusted, reduced pressure, the valve discharges to T (at pressure value higher then the reduced pressure- see diagrams) thus acting as safety or relief valve. Valves reducing pressure anA or B lines are with integral check valve 9 (types AM3-RP-AC or BC) and they allow reverse flow to port A or B of the solenoid valve.

5 INSTALLATION DIMENSIONS (mm)

Model AM3-RP-P

- 1 Label
- 2 Adjustment screw cover
- 3
- 4 Square ring 9.25 x 1.68 (4 pcs.), supplied with valve
- 5 Plug G1/4 (for pressure gauge)

All stackable valves AM-RP-* conform with ISO and CETOP specifications for mounting surface dimensions and for valves height 45 mm. Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals type OR 2037.

MODULAR VALVES 3-WAY PRESSURE COMPENSATOR WITH LOAD SENSING

AM3-LS-P3

40 l/min - 32 MPa (320 bar)

1 DESCRIPTION

3 way pressure compensator normally used together with proportional directional valves in order to control the flow independently from pressure variations. The selection of the piloting pressure is made by the use of the integrated shuttle valve which controls the ports A and B.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)	(7)
AM3	-	LS	-	P	3	/ / 10

- (1) AM3: 4-way modular valve CETOP 03
- (2) LS: pressure compensator with "Load sensing" function and adjustable QP
- (3) P: control on P line
- (4) 3: 3-way compensator with unloading of exceed pressure in T
- (5) Code reserved for more options and variants
V= adjustment knob
- (6) Standard version- control in A and B
A-control in A
B- control in B
- (7) Design number (progressive) of the valves

The valve is a 3-way pressure compensator, with direct action, modular version with the mounting surface correspondent to CETOP and ISO standards. It's function is a maintenance of pressure drops DP characteristics between the P and A or B. Normally used in a combination with directional proportional valves in order to provide control of the flow independently from the variations of the pressure. The selection of the pressure of the pilot on A and B lines is automatically executed by a check valve incorporated in the compensator

3 TECHNICAL DATA

Maximum rec. flow rate	0,66 dm ³ /s (40 l/min)
Maximum nominal pressure	32 MPa (320 bar)
Setting calibration Δp	adjustable from 0,5 to 4 MPa (5-40 bar)
Installation and dimensions	see 5
Mass	1kg

4 TYPICAL DIAGRAMS

In order to ensure the correct control function the outside pressure difference has to be increased when increasing the flow resistance due to a flow rate increase

5 INSTALLATION DIMENSIONS (mm)

The valves AM3-LS-P3* conform to ISO and CETOP standards with regards to mounting surface. Height of stacking is 40 mm. The sealing between the valve and mounting surface is insured by 4 seals type OR 2037 or Quad-ring.

6 CALIBRATION OF ΔP

Efficient calibration of DP of the valve AM3-LSP3 is fundamental procedure for setting range of flow to utensils. Increasing DP, according to the non-linear law, increases also value of compensated flows, that pass through regulating organ (throttle with variable light) independently of working pressure of the system. For example in a system illustrated in Typical applications p.1, composed of AM3-LSP3 and proportional valve HD3-PS-3RC-xx (see table HD3-PS), with DP of the valve of 1 MPa (10 bar), the flow to the actuator will be between 0 and 16 l/min, with DP of the valve of 3 MPa (30 bar), the flow to the actuator will be between 0 and 28 l/min (always independently of working pressure of the system). Therefore it is essential in order to optimize functioning of the system to regulate DP of the compensator. This can be done by acting with CH6 mm on the pin regulator after locking nut has been loosen to CH27 mm: it is suggested to loosen the spring completely by turning the pin with thread pitch 1,25 mm anticlockwise until full mechanical stop.

Thereafter by turning clockwise you obtain:

DP = 0,4 MPa (4 bar) run 2,5 mm* (2 turns)

DP = 1,2 MPa (12 bar) run 3,75 mm* (3 turns)

DP = 2,1 MPa (21 bar) run 5 mm* (4 turns)

DP = 3 MPa (30 bar) run 6,25 mm* (5 turns)

DP = 3,9 MPa (39 bar) run 7,5 mm* (6 turns)

* including one initial "dead" turn of appr. 2 mm (1,5 turns).

After desired calibration was done, lock with the fixing nut 1 to CH27 mm.

2-WAY PRESSURE COMPENSATOR MODULAR VALVES

AM3-PC-*

32 l/min - 32 MPa (320 bar)

1 DESCRIPTION

2 Way pressure compensator for meter- in application. The pressure variations due to loading changes are compensated that means that an increase in pump pressure cannot result in any flow increase. Provided that there is no preloading of the outlet port, the use of a meter in pressure compensator is limited only to drives with exclusively positive load direction.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)		
AM3	-	PC	-	/	-	/	10

(1) AM3: stackable valve CETOP 03 - Pressure 32 MPa (320 bar)

(2) PC: pressure compensator 2-way valve

(3) Service lines where the controls operate:

P: control on P with A, B selection

A: control on A

B: control on B

(4) Pressure compensator Δp

Δp standard= 1MPa (10 bar)

(5) Code reserved for more options and variants

(6) Design number (progressive) of the valves

AM3-PC-P

AM3-PC-A

AM3-PC-B

Valves AM3-PC-* are directly operated 2-way pressure compensators .

The main parts of these valves are the housing 1, control spool 2, spring 3 and logic valve 4. The spring 3 holds the spool in the open position from P2 to P1, provided that the pressure difference between P1 and A ($P1 - B$) is less than $p = 10$ bar. When the pressure difference exceeds the value of $p = 10$ bar, the spool shifts against spring until the desired pressure difference has been restored.

3 TECHNICAL DATA

Maximum rec. flow rate	32 l/min
Maximum nominal pressure	32 MPa (320 bar)
Pressure curves	see 4
Installation and dimensions	see 5
AM3-PC-P	approx 1,1 kg

4 TYPICAL DIAGRAMS

Typical curves for valves AM3-PC in standard configuration, with mineral oil at 36 cSt and at 50°C

EXAMPLE

Two way pressure compensator for meter-in application

5 INSTALLATION DIMENSIONS (mm)

All stackable valves AM3-PC-* conform with ISO and CETOP specifications for mounting surface dimensions and for valves height 40 mm. Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals type OR 2037.

6 HYDRAULIC FLUIDS

Seals and materials used on standard valve AM3-* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidant agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

PRESSURE COMPENSATED FLOW CONTROL VALVES

AM3-Q3-P

40 l/min - 32 MPa (320 bar)

1 DESCRIPTION

3 way pressure compensated flow control valves are designed to provide adjustable controlled flow rates independent of changes in system pressure.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)
AM3	-	Q3	-	P	/ 16 - / 10

(1) AM3: stackable valve CETOP 03 - Pressure 32 MPa (320 bar)

(2) Q3: 3-way pressure compensated flow control valves

(3) P: Service lines where the controls operate

(4) Flow control characteristics:

16=0,06-> 16l/min max regulated flow control rate to P1.

When the inlet flow (at P2) is more than the regulated value, the excess is discharged at T line

(5) Code reserved for more options and variants

(6) Design number (progressive) of the valves

3 TECHNICAL DATA

Maximum rec. flow rate	40 l/min	Control of the flow: By turning the knob 5, the value of the regulated flow changes. The scale/flow characteristic is approx linear and the full range is covered by turning the knob by approx 320°. The scale is divided in 10 marks. Clockwise: flow increases Anticlockwise: flow decreases When the required value is reached, set the knob position by fixing screw 8.
Maximum flow rate on P1 port	16 l/min	
Maximum nominal pressure	32 MPa (320 bar)	
Flow curves	see 4	
Installation and dimensions	see 6	
Mass	approx 0,8 kg	

4 TYPICAL DIAGRAMS

The scale/flow characteristic is approx linear (see 4) and the full range is covered by turning the knob by approx 320°. The scale is divided in 10 marks. Clockwise: flow increases Anticlockwise: flow decreases When the required value is reached, set the knob position by fixing screw 8.
Maximum flow rate on A port	24 l/min	
Maximum nominal pressure	32 MPa (320 bar)	
Flow curves	see 4	
Installation and dimensions	see 5	
Mass	approx 0,8 kg	

4 TYPICAL DIAGRAMS

5 INSTALLATION DIMENSIONS (mm)

All stackable valves AM-Q* conform with ISO and CETOP specifications for mounting surface dimensions and for valves height 40 mm. Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals type OR 2037.

6 HYDRAULIC FLUIDS

Seals and materials used on standard valve AM3* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

PRESSURE COMPENSATED FLOW CONTROL VALVES

QVC-06

32 l/min - 32 MPa (320 bar)

1 DESCRIPTION

Pressure compensated flow control valve designed to provide adjustable controlled flow independent of changes of pressure.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)
QVC	- 06 /	-	-	/	10

(1) QVC: pressure compensated, variable flow control valve with integral check valve for reverse flow

(2) 06: size CETOP 03- pressure 32 MPa (320 bar)

(3) Range of regulated flow:

01= 0 -> 1,6 l/min

03= 0 -> 3,2 l/min

06= 0 -> 6,3 l/min

16= 0 -> 16 l/min

32= 0 -> 32 l/min

(4) Pilot pressure arrangement

no designation: internal (standard)

E: external via P port

(5) Code reserved for more options and variants

no designation: no variant (standard)

K: key lock on the adjustment knob

(6) Design number (progressive) of the valves

without external pilot

with external pilot

QVC-06/*-E with external pilot is used for metering-in circuits to avoid "jumps" when the actuator starts

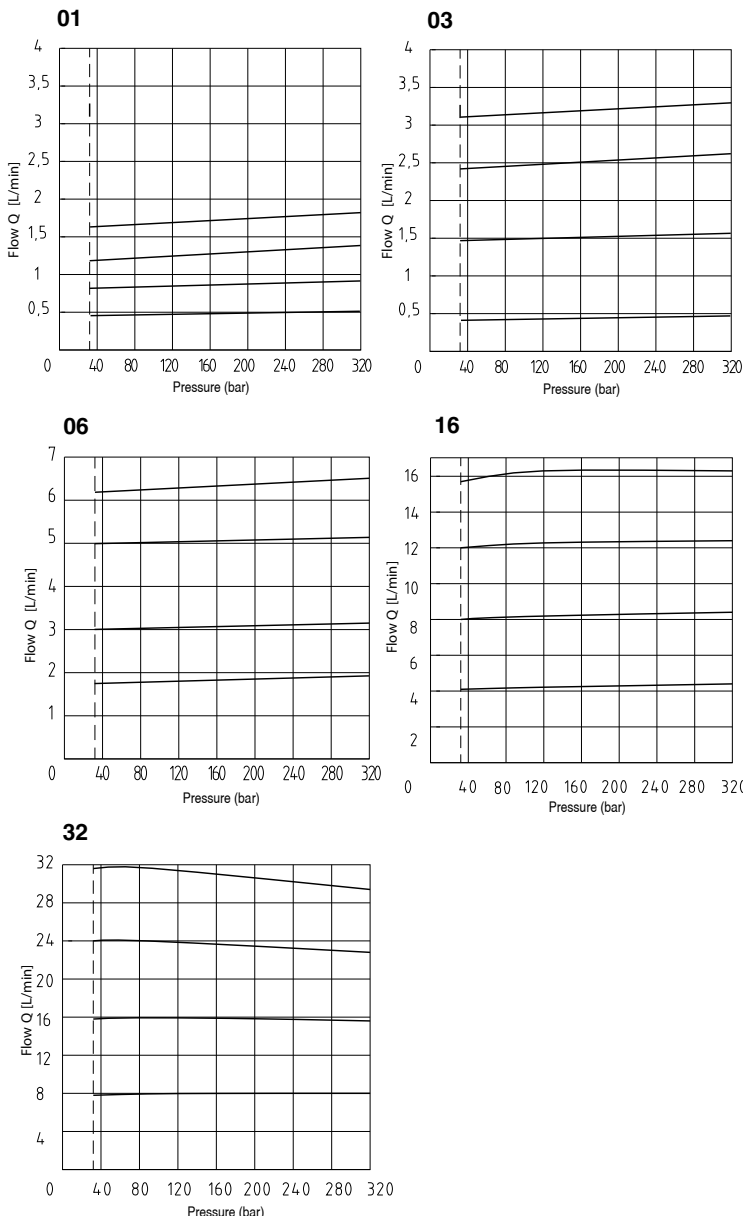

3 TECHNICAL DATA

Maximum rec. flow rate	32 l/min	Control of the flow: By turning the knob 5, the value of the regulated flow changes. For each range of flow (0->1,6; 0->3,2; 0->6,3; 0->16; 0->32 l/min) the scale/flow characteristics is approx linear (see below) and the full range is covered by turning the knob by approx 350°. The scale is divided in 10 marks. Clockwise: flow increases Anticlockwise: flow decreases When the required value is reached, set the knob position by fixing screw 8.
Maximum nominal pressure	32 MPa (320 bar)	
Flow curves	see 4	
Adjustment	see	
Installation and dimensions	see 5	
Mass	approx 1,2 kg	

4 TYPICAL DIAGRAMS

5 INSTALLATION DIMENSIONS (mm)

6 HYDRAULIC FLUIDS

Seals and materials used on standard valves QVC* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidantizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10cSt to 60 cSt.

SANDWICH VALVES WITH 3/4" 16 UNF 2-WAY CARTRIDGE VALVES

1 PRODUCTS OVERVIEW

In order to obtain an extensive flexibility in the design of the hydraulic circuits in systems based on CETOP 03 solenoid operated directional valves, Aidro introduces a new family of CETOP-03 modular bodies designed to be equipped with 3/4" 16 UNF 2-way cartridge valves. Since the cavity presents on the bodies is a standard (see 2) the circuit designer has the possibility to choice between a wide range of products (and therefore of functions) the cartridge valve to fit into the body. It's important to notice that the same cartridge valve perform different functions if fit in different bodies, thus further increasing the available configurations. Some of the possible functions are the following :

- Variable throttling
- Pressure compensated flow control (Meter-In or Meter-Out)
- Electric by-pass (normally open and normally closed)
- Unidirectional check valve

2 THE 3/4 16" UNF CAVITY

All the bodies of the family present SAE standard 2-way cavity 3/4" 16 UNF

For cartridge valves that perform flow control only in one direction (like check valves) 1 represents the inlet line, while 2 is the outlet.

3 STANDARD BODIES

Three types of standard bodies are available :

AM3*-P/34
control on **P** line

AM3*-ABX/34
control on **A** and/or **B** line
(Meter-Out)

AM3*-ABC/34
control on **A** and/or **B** line
(Meter-In)

For a more detailed list of the functions available see the technical tables AM3*-P/34, AM3*-ABX/34 and AM3*-ABC/34. Our technical department is available to study the feasibility of requested special configurations.

STACKABLE VALVE CHECK VALVE ON P LINE

AM3-CO-P/34

25 l/min - 32 MPa (320 bar)

1 DESCRIPTION

Direct operated check valve. All the internal part are made with high strenght steel and are machined with accuracy in order to assure the requested tightness. The controlled lines is on P line. The standard surafce treatment of the body is phosphate coated. Plugs are zinc coated.

2 ORDERING CODE

(4) Check valve opening (cracking) pressure (Pm):
no designation: Pm approx. 0.3 MPa (3 bar)
8: Pm approx. 0.8 MPa (8 bar)

(5) Code reserved for more options and variants

(6) Cavity for cartridge valves is 3/4" 16 UNF

Fluid flows freely in A, B and T lines. When pressure in P1 overcomes the sum of the pressure in P and the pressure due to the pre-load of spring, the poppet shifts axially and fluid flows from P1 to P. Reverse flow is prevented (without leakage) by the poppet, which kept against its seat by spring.

3 TECHNICAL DATA

Maximum rec. flow rate on P line	25 l/min
Maximum nominal pressure	32 MPa (320 bar)

4 HYDRAULIC FLUIDS

Seals and materials used on standard valves AM3-* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidantizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10cSt to 60 cSt.

5 TYPICAL DIAGRAMS

measured at $v = 36$ cSt and 50°C

6 INSTALLATION DIMENSIONS (mm)

All stackable valves AM3-* conform with ISO and CETOP specifications for mounting surface dimensions and for valves height (40 mm). Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals of OR type

STACKABLE VALVE ADJUSTABLE FLOW CONTROL

AM3-FO-P/34

25 l/min - 32 MPa (320 bar)

1 DESCRIPTION

Stackable valve CETOP 3 with flow restrictor function. With this model it is possible to control the line P.

On demand it is possible to have also the fine control option.

2 ORDERING CODE

(5) Code reserved for more options and variants

(6) Cavity for cartridge valves is 3/4" 16 UNF

Fluid flows freely on A, B and T lines. Fluid that flows on P line is regulated by a variable throttle valve, consisting in a needle 3 (which position is set by the adjustment screw 6) that changes the section of an annular passage.

3 TECHNICAL DATA

Maximum rec. flow rate on P line	25 l/min	Adjustment of the regulated flow:
Maximum nominal pressure	32 MPa (320 bar)	To decrease flow in P line turn clockwise the adjustment screw 6 (or the hand knob), after having unlocked its retaining nut 5

4 TYPICAL DIAGRAMS

measured at $\nu = 36$ cSt and 50°C

5 HYDRAULIC FLUIDS

Seals and materials used on standard valves AM3-* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidantizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

6 INSTALLATION DIMENSIONS (mm)

All stackable valves AM3-* conform with ISO and CETOP specifications for mounting surface dimensions and for valves height (40 mm). Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals of OR type

STACKABLE VALVE PRESSURE COMPENSATED, FIXED CONTROL VALVES

AM3-Q*-P/34

32 MPa (320 bar)

1 DESCRIPTION

Stackable valve CETOP 3 with flow restrictor function pressure compensated. With this model It is possible to control the line P. Different orifice sizes are available.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)
AM3	-	Q	-	P	/ 34

- (1) AM3: Stackable valve CETOP 03
- (2) Q: Pressure compensated, fixed flow control
- (3) Flow rate setting (see 3)
- (4) P: Line where the control operates
- (5) Code reserved for more options and variants
- (6) Cavity for cartridge valves is 3/4" 16 UNF

AM3-Q(*)-P/34

Fluid flows freely in A, B and T lines. P1->P : fluid flows through orifice of throttle 3 (flow rate depending on the value orifice diameter Ø C). When pressure difference between P1 and P increases, throttle 3 moves against spring 4 and reduces the area of the lateral orifices, thus keeping flow rate constant at the requested value.

3 TECHNICAL DATA

Maximum rec. flow rate on P line	25 l/min
Maximum nominal pressure	32 MPa (320 bar)

Approximate flow rates corresponding with the orifice Ø C		
Ordering Code	ORIFICE Ø C (mm)	Flow (l/min)
AM3-Q1-P/34	0,8	1
AM3-Q2-P/34	1	2
AM3-Q3-P/34	1,25	3
AM3-Q4-P/34	1,5	4
AM3-Q5-P/34	1,75	5
AM3-Q6-P/34	2	6
AM3-Q9-P/34	3	9

4 HYDRAULIC FLUIDS

Seals and materials used on standard valves AM3-* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

5 INSTALLATION DIMENSIONS (mm)

All stackable valves AM3-* conform with ISO and CETOP specifications for mounting surface dimensions and for valves height (40 mm). Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals of OR type

STACKABLE VALVE LOCK, SOLENOID OPERATED CONTROL VALVE ON P LINE

AM3-EVD-P/34-(024C)

25 l/min 25 MPa (250 bar)

1 DESCRIPTION

Stackable valve CETOP 3 with double poppet solenoid valve on P line.
With this model It is possible to control the line P.
Different voltages are available.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)
AM3	-	EVD	-	P	-
				/	34

(1) AM3: Stackable valve CETOP 03

(2) EVD: 2-way solenoid operated poppet valve

(3) P: Line where the control operates

(4) Code reserved for more options and variants

(5) 34: cavity for cartridge valves is 3/4" 16 UNF

(6) Electric voltage and solenoid coils:

0000: no coils

012C: coils for V12DC

024C: coils for V24DC

220R: coils for V220-230 RAC

AM3-EVD-P/34-024C

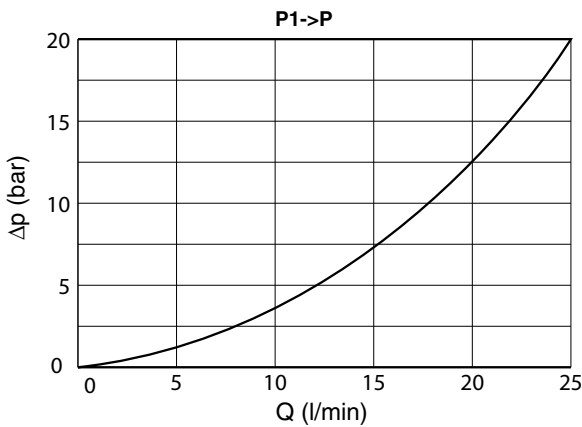

The poppet 3 is balanced by pressure and it is kept against its seat 4 by spring 6. When the solenoid 8 is energized, the mobile armature 9 moves the poppet 3 against spring 6, thus permitting flow between P1 and P. The manual override 13 is of the pin type and, when pushed, it permits the valve's operation in case of electric failure.

3 TECHNICAL DATA

Maximum nominal pressure	25 MPa (250 bar)	Electric features:
Nominal flow rate on P line	16 l/min	Those solenoid valves are normally equipped by coils type C33, which are energized from DC or AC supply. Coils type C33-***C are DC energized directly from a V***DC supply. Coils type C33-***R are RAC (Rectified Alternate Current) energized from a V***AC supply, by a full wave bridge rectifier incorporated in the connector. Coils type C33 are normally provided for use of ISO4400/DIN43650/A connectors. Standard coils are compatible with KA-132 connectors (see table)
Maximum rec. flow rate on P line	20 l/min

DIRECTIONAL CONTROL VALVES SOLENOID OPERATED

HD5-ES-*

120 l/min 35 MPa (350 bar)

1 DESCRIPTION

Valves HD5-ES are directional control valve with subplate mounting interface acc. to ISO 4401, DIN 24340 (CETOP 05).

The design of the body is a quality five chamber casting.

The valve is available with interchangeable metallic DC solenoids, also for AC power supply using a built-in rectifier bridge inside the coil.

In the standard version, the valve housing is phosphated for 240 h salt spray protection acc. to ISO 9227. Enhanced surface protection for mobile sector available (ISO 9227, 520 h salt spray).

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)
HD5	-	ES	-	-	/ 20

(1) HD5 : 4-way directional control valve CETOP 05 – Pressure 32 MPa (320 bar)

(2) ES : electrically controlled, standard

(3) Spool type (see 4)

-number is the main spool type

-letter is the solenoid or spring arrangement:

C : 2 sol. , spool is spring centered (3 position)

N : 2 sol. , spool is detented (2 position)

LL : 1 sol. (a), spool is spring offset (2 pos. , end to end)

ML: 1 sol. (a), spool is spring centered (2 pos. , middle to end)

LM: 1 sol. (a), spool is spring offset (2 pos. , end to middle)

(4) Code reserved for special variants:

b: only for version LL, ML, LM, solenoid b installed (instead of a)

T* : soft shifting device (see 12 and 13)

K : water proof caps on override pin (see 14)

Z* : anti-corrosion variants (see 16)

DR: solenoid(s) chamber draining (see 15)

(5) Electric voltage and solenoid coils (see 8, 9, 10)

(6) 20: design number (progressive) of the valve

The spool 1 shifts into the valve body 7 subject to the action of springs and solenoids 2 and 3. Spool 1, depending from its shape and its position in the valve body 7, opens and/or closes passages between P, A, B and T ports, thus controlling the direction of the hydraulic flow. In case of electric cut-offs the spool can be manually shifted by acting on the override pins 9, located at the end of the solenoids and accessible through the retaining nuts.

3 TECHNICAL DATA

Nominal flow	120 l/min
Max. rec. flow	see 5
Nominal pressure (P, A,B)	32 MPa (320 bar)
Max. rec. Pressure (P, A, B)	35 MPa (350 bar)

7 INSTALLATION DIMENSION (mm)

All valves HD5-ES-* conform with ISO and CETOP specifications for mounting surface dimensions and for valves height.

When assembled to its mounting plate, valve HD5-ES-* must be fastened with 4 fixing bolts (socket head screws to ISO 4762) M6 x 40 mm (or M6 x* according to the number of modules) of class 12,9 (ISO898) tightened at 12 Nm torque.

Leakage between valve and mounting surface is prevented by the positive compression on their seats of 5 seals of Quad-Ring type 12,42 x 1,68 x 1,68 mm.

8 SOLENOID COILS, WITH STANDARD ELECTRIC CONNECTION TO ISO 4400 / DIN 43650, FOR DC SUPPLY

Standard valves type HD5-ES-* are operated by solenoid that are energized directly from a D.C. voltage supply. Solenoid valves can be supplied without electric coils as HD5-ES*-0000 and coils can be supplied separately as B05-***C.

Directly from D.C. supply			
Voltage	Valve Code	Coil Code	Nominal Current (A)
V 12 DC	HD5-ES-*-*-012C	B05-012C	3,17
V 24 DC	HD5-ES-*-*-024C	B05-024C	1,73

Permissible supply voltage variation : +5% -10%
Special voltages available : V 48 DC, V 106 DC, V 205 DC

9 SOLENOID COILS, WITH STANDARD ELECTRIC CONNECTION TO ISO 4400 / DIN 43650, FOR AC SUPPLY

Valves type HD5-ES-* can be operated from A.C. supply by the use of coils that incorporate a full wave bridge rectifier. Coils with rectifier can be supplied separately as B05-***A.

Directly from A.C. supply			
Voltage	Valve Code	Coil Code	Nominal Current (A)
V 115 AC / 50 (60) Hz	HD5-ES-*-*-115A	B05-115A	0,40
V 230 AC / 50 (60) Hz	HD5-ES-*-*-230A	B05-230A	0,20

Permissible supply voltage variation : +5% -10%
Special voltages available : V 48 DC, V 106 DC, V 205 DC

10 OPTIONAL ELECTRIC CONNECTION

Coils type B05-* for valves HD5-ES-* can be supplied with 2-poles AMP Junior-Timer electric connection. Coils with AMP connection can be supplied separately as B05-***CAMP

AMP electric connection			
Voltage	Valve Code	Coil Code	Nominal Current (A)
V 12 DC	HD5-ES-*-*-012 CAMP	B05-012CAMP	3,17
V 24 DC	HD5-ES-*-*-024 CAMP	B05-024CAMP	1,73

Other optional electric connection are available :

- Flying Leads
- Flying Leads (250 mm) with Deutsch connection (DT04-2P)

11 VERSION "N" : MECHANICAL DETENT ON SPOOL

Solenoids valves with detent typically are 2 position, 2 solenoid, no-spring valves where the spool is kept at the extreme ends of its stroke by a mechanical device. This permits that solenoids are energized by short time current pulses and the spool remains at its position regardless of forces due to hydrodynamics or gravitational/inertial effects (vibrations).

12 VERSION "T": SOFT SHIFTING

Solenoid valves with soft shifting devices are 2 or 3 position valves which incorporated a fixed throttling orifice (Ø 0,6 mm) on the channel that connects the extreme hydraulic chambers of the valve. The throttling effect controls the spool shifting time, thus limiting unwanted hydraulic shocks.

13 VERSION "TR": ADJUSTABLE SOFT SHIFTING

In Version "TR" valves, the fixed orifice is replaced by an adjustable, variable throttle valve that permit a fine and precise adjustment of the spool shifting time. To increase the throttling (and therefore the shifting time) turn clock-wise the adjusting screw (Ch. 3 mm), after having unlocked its retaining nut (Ch. 10 mm).

14 VERSION "K" : OVERRIDE PIN

Solenoid valves according to "K" version have override actuators that push on the valve's override pins and permit a quick and easy "hand operation" of the valves, without the need of any tool. The override actuator is incorporated in a flexible rubber cap that is easily applicable on the solenoid retaining nuts and that protects from moisture and water splashes.

15 VERSION "DR" : SEPARATE DRAINING OF THE SOLENOID CHAMBER

Solenoid valves according to "DR" version present a draining line of the chambers of the solenoids. This version should be adopted in presence of high counterpressure on T line that exceed the permissible recommended maximum pressure for T ports of the valve (210 bar). Position of additional draining port DR is conform with ISO 4401-05 interface and correspond to the Y port.

Dimensioni in mm

16 ANTICORROSION OPTIONS

On HD5-ES-* standard valves the body is phosphate coated, the solenoid tubes are not treated and coils mantel and irons are zinc trivalent plated. To increase the resistance to corrosive agents different variants are available :

ZT : • Body, solenoid tubes and coils irons are zinc trivalent plated

ZL : • Body is coated with special TEMADUR 40 zinc painting
• Solenoids have 8-12 µm zinc plating

ZK : • Body is coated with special TEMADUR 40 zinc painting
• Solenoids tube and coils irons are "zinc-nickel" plated

Example of ZK painted valve : HD5-ES-1LLb-ZK-024C/20

DIRECTIONAL CONTROL VALVES SOLENOID OPERATED

HD5-ED-*

125 l/min 32 MPa (320 bar)

1 DESCRIPTION

Valves HD5-ED are directional control valve with subplate mounting interface acc. to ISO 4401, DIN 24340 (CETOP 05).

The valve is designed for low performance applications when you need a CETOP 5 interface but limited flow rates.

The valve is available with interchangeable metallic DC solenoids, also for AC power supply using a built-in rectifier bridge inside the coil.

In the standard version, the valve housing is phosphated for 240 h salt spray protection acc. to ISO 9227.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)	(7)
HD5	-	ED	-	-	-	/ 10

(1) HD5 : 4-way directional control valve CETOP 05

(2) ED : electrically controlled

(3) Spool type (see 4)

-number is the main spool type

-letter is the solenoid or spring arrangement:

C : 2 solenoid , spool is spring centered (3 position)

LL : 1 solenoid, spool is spring offset (2 position)

ML: 1 solenoid, spool is spring centered (2 position)

(4) Code reserved for special variants

(5) Electric voltage and solenoid coils:

0000: no coil(s)

012C: coil(s) for 12 V DC

024C: coil(s) for 24 V DC

115A: coil(s) for 110/50 V AC- 115/60 V AC

230A: coil(s) for 220/50 V AC - 230/60 V AC

(6) Coil connection:

no designation: DIN 43650-A ISO 4400

AMP: Amp Junior Timer - vertical configuration

AMPX: Amp Junior Timer - axial configuration

D: Deutsch

(7) Design number (progressive) of the valve

The spool 5 shifts into the valve body 1 subject to the action of springs 4 and solenoids. Spool 5, depending from its shape and its position in the valve body 1, opens and/or closes passages between P, A, B and T ports, thus controlling the direction of the hydraulic flow.

3 TECHNICAL DATA

Nominal flow	100 l/min	Electric characteristics: Valve type HD5-ED-* are operated by solenoid that are energized: - directly from a DC voltage supply 24 V DC = 024C 12 V DC = 012C - by the use of coils that incorporate a full wave rectifier, from AC voltage supply: 115A110/50 V AC- 115/60 V AC = 115A 220/50 V AC - 230/60 V AC = 230A All connectors must conform to ISO 4400 (DIN 43650) and electric circuitry must be able to carry the following rated current values : V 12 DC = 2,4 A V 115/50 = 0,26 A V 24 DC = 1,2 A V 230/50 = 0,14 A Coils with 2 electric pins, conforming with AMP connectors, are only available for DC supply (example of code : B03-012C AMP). Permissible supply voltage variation : ± 10 %
Maximum rec. flow rate see	125 l/min	
Maximum nominal pressure (P,A,B)	32 MPa (320 bar)	
Maximum pressure at T port	21 MPa (210 bar)	
Pressure drops	see 5	
Energizing switching times	70-100 ms	
Protection to DIN 40050	IP 65	
Duty cycle	100%	
Installation and dimensions	see 7	
Mass	3,0/2,4 kg

7 INSTALLATION DIMENSION (mm)

All valves HD5-* conform with ISO and CETOP specifications for mounting surface dimensions and for valves height.

When assembled to its mounting plate valve HD5-* must be fastened with 4 bolts M6x35 (or M6x** according to the number of modules) tightened at 12 Nm torque.

Leakage between valve and mounting surface is prevented by the positive compression on their seats of 5 seals of O Ring type 12,42x1,78 - 90 Shore.

8 SOLENOID

Solenoid valves can be supplied without electric coils, as HD5-ED-****-0000. Coils are ordered separately ; standard, 3 electric pins, coils are :

- B03-024C ; B03-012C
- B03-115A ; B03-230A

Connections to the electric supply is made by standard 3-PIN connectors, according to ISO 4400 (DIN 43650). Connectors can be with different cable exit size (PG9, PG11) and beside of the plain connecting function they may incorporate various features like

- Signal led
- Voltage surge suppressor, etc.

9 HYDRAULIC FLUID

Seals and materials used on standard valves HD5-* are fully compatible with hydraulic fluids of mineral base, upgraded with antifoaming and anti oxidizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

10 MANUAL OVERRIDE

In case of electric cut-offs, the spool can be manually shifted by acting on the emergency pins, located at the end of the solenoids and accessible through the retaining nuts.

STACKABLE VALVES FLOW CONTROL

AM5-FC-*

100 l/min 32 MPa (320 bar)

1 DESCRIPTION

Stackable valve CETOP 5 with meter out control (referred to the hydraulic actuator). It is possible to control the lines A, B or AB simply turning the side screws.

On demand it is possible to have also the fine control option.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)
AM5	-	FC	-	-	/ 10

(1) AM5 : stackable valve CETOP 05 - Pressure 32 MPa (320 bar)

(2) FC : one-way flow control valves with meter-out control (referred to the hydraulic actuator)

(3) Service lines where the controls operates:

AB : controls on A and B. Fluid flows unrestricted A->A1 and B->B1; flow is controlled from A1->A and B1->B.

A : flow is controlled from A1->A; free on B.

B : flow is controlled from B1->B; free on A.

(4) flow control characteristics for A1->A and B1->B

and check valve opening pressure (Pm) for flow A ->A1 and B->B1

no designation : standard control and Pm approx 0.04 MPa (0.4 bar)

V : fine control

4 : Pm approx 0.4 MPa (4 bar)

(5) Code reserved for special variants

(6) Design number (progressive) of the valve

ISO 4401-05

AM5-FC-AB

Fluids flows freely on P and T lines: on service lines A and/or B with controls, fluid flows from A -> A1 (and/or B-> B1) overcoming the force of spring 3 acting on sleeve 2; fluid flows from A1-> A (and/or B1->B) through orifices to sleeve 2 which is pushed against its seat; the throttling axis 1, which is shifted by screwing it and locked by its nut 4, partially obstructs the control orifices, thus making the flow rate entirely dependent upon the available pressure drop.

AM5-FC-AB

AM5-FC-A

AM5-FC-B

3 TECHNICAL DATA

Maximum rec. flow rate	100 l/min	Control of the flow: The control is made by throttling from A1->A (and/or B1->B), through variable orifices. Depending on the various sleeve/axis combination, the control adjustment is: - (standard) : orifices area is reduced from 100% (*) to 0% with 6 complete turns of the adjustment screw. -V (fine): from 100% (**) to 0% with 5 complete turns of the adjustment screw. (*) 100% approx: Q=60 l/min at p=20 bar (**) 100% approx : Q=30 l/min at p=20 bar The axis is shifted to increase throttling by unlocking its nut and turning clock wise the adjustment screw. Suitable mechanical stops prevent dangerous manoeuvring.
Maximum nominal pressure	32 MPa (320 bar)	
Pressure drops	see 4	
Installation and dimensions	see 6	
mass	approx 3 kg	

4 TYPICAL DIAGRAMS

Typical Δp -Q curves for valves AM5-FC-AB in standard configuration, with mineral oil at 36 cSt and at 50°C with throttling axis at full retraction.

All stackable valves AM5-FC-* conform with ISO and CETOP specifications for mounting surface dimensions (see also front page). Valves height 50 mm. Leakage between valve and mounting surface is prevented by the positive oppression on their seats of 4 seals of OR type or Quading type.

5 HYDRAULIC FLUIDS

Seals and materials used on standard valves AM5-* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidantizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

6 INSTALLATION DIMENSIONS

STACKABLE VALVES FLOW CONTROL

AM5-FX-*

100 l/min 32 MPa (320 bar)

1 DESCRIPTION

Stackable valve CETOP 5 with meter in control (referred to the hydraulic actuator). It is possible to control the lines A, B or AB simply turning the side screws.

On demand it is possible to have also the fine control option.

6 INSTALLATION DIMENSIONS

All stackable valves AM5-FX-* conform with ISO and CETOP specifications for mounting surface dimensions. Valves height 50 mm. Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals of OR type or Quading type.

STACKABLE CHECK VALVES

AM5-CO-*

100 l/min 32 MPa (320 bar)

1 DESCRIPTION

Direct operated check valve. All the internal part are made with high strenght steel and are machined with accuracy in order to assure the requested tightness.

The controlled lines are A, B or AB.

The standard surafce treatment of the body is phosphate coated.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)
AM5	-	CO	-	-	/ 10

Maximum rec. flow rate on free channels	100 l/min
Maximum nominal pressure	32 MPa (320 bar)
Pressure drops	see 4
Installation and dimensions	see 5

4 TYPICAL DIAGRAMS

Typical Δp -Q curves for valves AM5-CO* in standard configuration, with mineral oil at 36 cSt and T=50°C.

5 INSTALLATION DIMENSIONS

- Dimensions in millimeters:
- 1 Name plate
 - 2 4 mounting through-holes
 - 3 Square ring 12.42x1.68 (5 pcs.) supplied with valve

All stackable valves AM5-* conform with ISO and CETOP specifications for mounting surface dimensions and for valves height (50 mm). Leakage between valve and mounting surface is prevented by the positive compression on their seats of 5 seals of Quad-Rings type 12,42 x 1,68 x 1,68 mm or 5 ORings type 12,5 x 1,68.

STACKABLE CHECK VALVES

AM5-CP-*

100 l/min 32 MPa (320 bar)

1 DESCRIPTION

Pilot operated check valve. All the internal part are made with high strenght steel and are machined with accuracy in order to assure the requested tightness. The controlled lines are A, B or AB. The standard surface treatment of the body is phosphate coated. Plugs are zinc coated.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)
AM5	-	CP	-	-	/ 10

- (1) AM5 : stackable valve CETOP 05 - Pressure 32 MPa (320 bar)
- (2) CP : check valve, pilot operated (hydraulically)
- (3) Service lines where the controls operates:
 AB: p.o. checks on A and B. Fluid flows A->A1 and B->B1 and flow A1 ->A (or B1->B) is permitted only when B (or A) is pressurized
 A: p.o. check on A; flow A1->A is permitted only when B is pressurized
 B: p.o. check on B; flow B1->B is permitted only when A is pressurized
- (4) Check valve opening (cracking) pressure (Pm) for free flow A->A1 and B->B1 no designation (standard): Pm approx 0.2 MPa (2 bar)
- (5) Code reserved for special variants (materials, seals, surface treatments, etc.)
- (6) Design number (progressive) of the valves.

AM5-CP-AB

AM5-CP-A

AM5-CP-B

Fluid flows freely on P and T lines; on service lines A and/or B with p.o. check, fluid flows from A -> A1 (and/or B -> B1) overcoming the force of spring acting on poppet 4, and fluid is blocked from A1-> A (and/or B1-> B). When, by switching the solenoid operated 4-way directional valve, pressure is made available at, for instance, port B fluid flows B -> B1 and the pilot piston 2, shifting from its central position, forces poppet 4, on service line A, to open and permit flow A1 -> A. The valve housing 1 is phosphatate coated.

3 TECHNICAL DATA

Maximum rec. flow rate	100 l/min	Piloting pressure:
Maximum nominal pressure	32 MPa (320 bar)	To shift the pilot piston and to open the check in A the piloting pressure must be, at B:
Pressure drops	see 4	$P_p = P_b = \frac{P_{a1} + P_m - P_a}{5,6} + P_a$
Pilot area ratio piston/poppet	approx 5,6	where: P_p = piloting pressure; P_b = pressure in B;
Installation and dimensions	see 5	P_a = pressure in A; P_{a1} = pressure in A1;
Mass	approx 3 kg	P_m = check valve opening pressure (spring)
		or to open the check in B:
		$P_p = P_a = \frac{P_{b1} + P_m - P_b}{5,6} + P_b$

4 TYPICAL DIAGRAMS

Typical Δp -Q curves for valves AM5-CP-AB in standard configuration, with mineral oil at 36 cSt and at 50°C.

5 INSTALLATION DIMENSIONS

Seals:
5 x OR 12,5 x 1,68
or
5 x QR14S 12,42 x 1,68

6 HYDRAULIC FLUIDS

Seals and materials used on standard valves AM5-* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

All stackable valves AM5-CP-* conform with ISO and CETOP specifications for mounting surface dimensions and for valves height (50mm). Leakage between valve and mounting surface is prevented by the positive compression on their seats of seals (of OR type or Quading type).

STACKABLE VALVES PILOT OPERATED

AM5-MP-*

100 l/min 32 MPa (320 bar)

1 DESCRIPTION

Stackable pressure relief valve pilot operated. The valve is made with a steel body combined with a pressure relief cartridge valve pilot operated for a stable pressure control.

The body of the valve is phosphate coated. The cartridge valve is zinc coated. The pressure can be set in different pressure ranges.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)	(7)
AM5	-	MP	-	/	-	/ 10

(1) AM5: stackable valve CETOP 05 - Pressure 32 MPa (320 bar)

(2) MP: pressure relief-pilot operated (hydraulically)

(3) Service lines where the controls operates:

P : relief on P and discharge to T

A : relief on A and discharge to T

BA: independent relief on B and on A and discharge to T

AB: relief on A and B with crossed discharge

(4) Pressure adjustment ranges:

6,3 from 10 to 70 bar

12,5 from 10 to 140 bar

20 from 20 to 210 bar

32 from 20 to 320 bar

(5) pressure adjustment range for relief on A (only for models AM5-MP-BA or for relief on B for models AM5-MP-AB)

(6) code reserved for special variants (materials, seals, surface treatments, etc.)

(7) Design number (progressive) of the valves

AM5-MP-P

AM5-MP-AB

AM5-MP-A

AM5-MP-BA

3 TECHNICAL DATA

Maximum rec. flow rate	100 l/min	Adjustment of the relief pressure:
Maximum nominal pressure	32 MPa (320 bar)	Relief pressure is reached when the axial hydraulic forces on piston equal the force of spring; the value of the relief pressure can be therefore changed, within the limits of the chosen adjustment range, by changing the compression of spring. To increase the relief pressure, turn clock wise the adjustment screw ch.5 , after having unlocked its nut ch.17.
Pressure relief curves	see 4	The pressure gradient is approx:
Installation and dimensions	see 5	6,3 : 20 bar/turn
mass:		12,5 : 40 bar/turn
AM5-MP-P	approx 2,7 Kg	20 : 63 bar/turn
AM5-MP-AB	approx 3,6 Kg	32 : 100 bar/turn
		When the required level of pressure is reached, lock the nut.

4 TYPICAL DIAGRAMS

Typical Δp -Q curves for valves AM5-CP-AB in standard configuration, with mineral oil at 36 cSt and at 50°C.

5 HYDRAULIC FLUIDS

Seals and materials used on standard valves AM5-* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidantizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt

All stackable valves AM5-MP-* conform with ISO and CETOP specifications for mounting surface dimensions (see also front page) and for valves height (50mm). Leakage between valve and mounting surface is prevented by the positive compression on their seats of 5 seals (OR 2050).

6 INSTALLATION DIMENSIONS

STACKABLE VALVES PRESSURE REDUCING

AM5-RP-*

100 l/min 32 MPa (320 bar)

1 DESCRIPTION

Stackable pressure reducing valve pilot operated. The valve is made with a steel body combined with a pressure relief valve. The body of the valve is phosphate coated. The cartridge valve is zinc coated. The pressure can be set in different pressure ranges.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)
AM5	-	RP	-	-	/ 20

(1) AM5 : stackable valve CETOP 05 - Pressure 32 MPa (320 bar)

(2) RP : pressure reducing, pilot operated

(3) Lines where the control operates

P : relief on P and discharge to T

A : relief on A and discharge to T

B : relief on A and discharge to T

(4) controlled pressure adjustment ranges :

6,3: from 0,5 to 7 MPa (from 5 to 70 bar)

16: from 1 to 16 MPa (from 10 to 160 bar)

20: from 1,6 to 2,1 MPa (from 16 to 210 bar)

(5) Code reserved for special variants

V: adjustment with knob

(6) Design number (progressive) of the valves

All valves type AM5-RP-* reduce pressure P of the solenoid valve as follows : On version P, the valve constantly reduce pressure at the settled value On version A, the pressure is reduced in direction A -> A1 while the return is free On version B, the pressure is reduced in direction B -> B1 while the return is free All valves type AM5-RP-* have a 1/4" BSP manometer port (M) for the direct reading of the reduced pressure.

3 TECHNICAL DATA

Maximum rec. flow rate on regulated line	80 l/min	Adjustment of the pressure: Reduced pressure is obtained by throttling the flow on spool which is balanced, on one side, by the reduced pressure and, on the other side, by the positioning spring and by the pilot pressure. Pilot pressure is established by the action of spring on the pilot valve. The value of the reduced pressure is changed by changing the compression of spring. To increase the value of the reduced pressure, turn clockwise acting on adjustment element 2 (C hex 6 mm), after having unlocked its retaining nut (C hex 27 mm).
Maximum input pressure	32 MPa (320 bar)	
Maximum rec. flow rate on free lines	100 l/min	Pilot pressure is established by the action of spring on the pilot valve. The value of the reduced pressure is changed by changing the compression of spring. To increase the value of the reduced pressure, turn clockwise acting on adjustment element 2 (C hex 6 mm), after having unlocked its retaining nut (C hex 27 mm).
Pilot flow rate	0,7 l/min	
mass		
3,2 kg	Model A,B	
2,85 kg	Model P

P 3/4" BSP and T 1" BSP - one pair on each rear side of a monoblock; it allows, if needed, to double supply (P) or double outlet (T); close the unused ports. (* If both pairs of ports P and T are used, maximum recommended Q values can be increased.
Installation:	4 mounting holes threaded M 12 on the rear side
Mounting surface of the valve	
Planarity of the surface	0,01/100
Rugosity:	Ra 0,8
Auxiliary ports:	On the side of monoblock there are auxiliary ports threaded 1/4" BSP, connected to the line A (one per each section). Monoblocks are sold with these ports closed by plugs with cylindric thread, with hexagon socket for 6 mm key.

4/2 and 4/3 DIRECTIONAL CONTROL VALVES PILOT OPERATED

HD7-*

350 l/min 32 MPa (320 bar)

1 DESCRIPTION

Valves HD7-ES are directional control valve pilot operated with subplate mounting interface acc. to ISO 4401-07, DIN 24340 (CETOP 07 - NG16).

The body is made with a high quality casting.

The CETOP 3 pilot valve is available with interchangeable metallic DC solenoids, also for AC power supply using a built-in rectifier bridge inside the coil.

In the standard version the valve housing is phosphated.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)	(7)
HD7	-	-	/		-	/ 40

(1) HD7: 4-way directional control valve CETOP 07 - Pressure 32 MPa (320 bar)

(2) Variants:

ES: electrically controlled, standard

HH: hydraulically piloted (main body)

(3) Spool type:

-number is the main spool type

-letter is the solenoid or spring arrangement:

C : 2 solenoids spool is spring centered (3 position)

N : 2 solenoids pilot is detented (2 position)

LL : 1 solenoid (a), spool is spring/hydr. offset (2 position, end to end)

ML : 1 solenoid (a), spool is spring offset (2 position, middle to end)

LM : 1 solenoid (a), spool is spring offset (2 position, end to middle)

b : only for versions LL, MI, LM, see also functional symbols

(4) Code reserved for options and variants

C : adjustable limits for main spool stroke

D : double flow control valve to adjust shifting speed

G : adjustable limits and adjustable shifting speed

P : check valve incorporated in P port of the valve

(5) Pilot and drain arrangement

No designation : internal pilot and external drain (standard)

I : internal pilot and internal drain

E : external pilot and external drain

(6) Electric voltage and solenoid coils

0000 : no coils

012C : coils for V12DC

024C : coils for V24DC

115A : coils for V110/50 - V115/60 AC

230A : coils for V220/50 - V230/60 AC

See also electric characteristic

(7) Design number (progressive) of the valves

The HD7-ES solenoid operated - hydropiloted valves are consisting of an HD3-ES type solenoid operated directional control valve (see data sheet HD3-ES) that operates a 4-way hydropiloted control valve with a connection surface in accordance with the CETOP standards. They are available in various configurations and spool types. The pilot and the drain connections can be made internal or external by inserting or removing the accordant threaded plugs located in the main directional control valve. A wide range of configurations and different solenoid operated-hydropiloted directional control valve spool positions are available: - 4-way, 3-position directional control valve, with two solenoids; positioning of the spool in center position is obtained with centering springs. - 4-way, 2-position directional control valve with one solenoid; positioning of the spool in center position is determined hydraulically by the pilot valve and mechanically (even without pressure) by the main stage return spring. - 4-way, 2-position directional valve, with two solenoids, with mechanical detent of the shifted pilot spool positions when solenoids are de-energized. The basic surface treatment of the valve housing is phosphate coated and the solenoids are zinc coated.

3 TECHNICAL DATA

Max. recommended flow (spring centering)	250 l/min
Max. recommended flow (hydraulic centering and hydraulic off set)	350 l/min
Max pressure at P, A, B ports	320 bar
Max pressure at T port (internal drain)	160 bar
Max pressure at T port (external drain)	250 bar
Pilot pressure minimum	5 bar
Pilot pressure Max. recommended	200 bar
Mass:	
HD7-ES	approx. 9 Kg
HD7-HH	approx. 7,5 Kg

6 INSTALLATION DIMENSION

Single valve fastening:	4 bolts M10 x 60 * 2 bolts M6 x 60 *	* Bolts is not supplied
Bolt torque:	M10 x 60: 40 Nm - bolts A 8.8 M6 x 60: 8 Nm - bolts A 8.8	
Threads of mounting holes:	M6 x 18; M10 x 18	
Seal rings:	4 O-rings type 22.22 x 2.62 (OR 130) 2 O-rings type 10.82 x 1.78 (OR 2043)	

7 TYPE OF COMMAND

Solenoid control: HD7-ES

The valve is supplied with a pilot solenoid valve type HD3-ES.

Hydraulic control: HD7-HH

The valve is supplied as main body.

X and Y connections are used for the hydraulic control of the valve.

8 CONTROLS

Control of the main spool stroke: C

It is possible to introduce special stroke controls in the heads of the hydro-piloted valve so as to vary the maximum spool stroke. This solution allows control of the flow rate from the pump to the actuator and from the actuator to the outlet, obtaining a double adjustable control on the actuator. Add the letter **C** to the identification code to request this device.

Control of the main spool shifting speed: D

By placing a double flow control valve between the pilot solenoid valve and the hydro-piloted valve, the piloted flow rate can be controlled and therefore the shifting speed can be varied. Add the letter **D** to the identification code to request this device.

Control of the main spool stroke and shifting speed: G

It is possible to have the valve fitted with both the spool stroke device and the piloting flow rate control device. Add the letter **G** to the identification code to request this solution.

9 SPECIAL CONFIGURATION

Solenoid valves with special spools

Besides the standard configurations (see pages 2 and 3), we can develop, on request, connection diagrams with special spools for a wide range of applications: consult our technical department for their identification, feasibility and operating limits.

19C

18C

15C

38C

Check valve incorporated on line P: P

Valve HD7 is available upon request with check valve incorporated on line P. This is particularly useful to obtain the necessary piloting pressure when the main control valve, in the rest position, has line P connected to the T outlet. The cracking pressure is 5 bar. Add P to the identification code for this request.

10 PILOT and DRAIN

The HD7 valves are available with pilot and drain, both internal and external. The version with external drain allows for a higher back pressure on the outlet.

Type of valve		Plug assembly	
		X	Y
HD7-ES-**/*	Internal pilot and external drain	NO	YES
HD7-ES-**/*I	Internal pilot and internal drain	NO	NO
HD7-ES-**/*E	External pilot and external drain	YES	YES
HD7-ES-**/*EI	External pilot and internal drain	YES	NO

X: plug M6 x 8 for external pilot
Y: plug M6 x 8 for external drain

4/2 and 4/3 WAY DIRECTIONAL CONTROL VALVES PILOT OPERATED HD8-*

600 l/min 32 MPa (320 bar)

1 DESCRIPTION

Valves HD8-ES are directional control valve pilot operated with subplate mounting interface acc. to ISO 4401-08, DIN 24340 (CETOP 08 - NG25).

The body is made with an high quality casting.

The CETOP 3 pilot valve is available with interchangeable metallic DC solenoids, also for AC power supply using a built-in rectifier bridge inside the coil.

In the standard version the valve housing is phosphated.

2 ORDERING CODE

230A : coils for V220/50 - V230/60 AC

See also electric characteristic

(7) Design number (progressive) of the valves

The HD8-ES solenoid operated - hydro-piloted valves are consisting of an HD3-ES type solenoid operated directional control valve (see data sheet HD3-ES) that operates a 4-way hydro-piloted control valve with a connection surface in accordance with the CETOP standards. They are available in various configurations and spool types. The pilot and the drain connections can be made internal or external by inserting or removing the accordant threaded plugs located in the main directional control valve. A wide range of configurations and different solenoid operated-hydro-piloted directional control valve spool positions are available: - 4-way, 3-position directional control valve, with two solenoids; positioning of the spool in center position is obtained with centering springs. - 4-way, 2-position directional control valve with one solenoid; positioning of the spool in center position is determined hydraulically by the pilot valve and mechanically (even without pressure) by the main stage return spring. - 4-way, 2-position directional valve, with two solenoids, with mechanical detent of the shifted pilot spool positions when solenoids are de-energized. The basic surface treatment of the valve housing is phosphate coated and the solenoids are zinc coated.

- 2 Manual override
- 3 Space required to remove coil
- 4 Electrical connector
(must be ordered separately)
- 5 Space required to remove connector

Dimensions in millimetres

Single valve fastening:	6 bolts M12 x 60 *
Bolt torque:	69 Nm - bolts A 8.8; 1155 Nm - bolts A 12.9
Threads of mounting holes:	M12 x 20
Seal rings:	4 O-rings type 29.82 x 2.62 2 O-rings type 20.24 x 2.62

7 TYPE OF COMMAND

Solenoid control: HD8-ES

The valve is supplied with a pilot solenoid valve type HD3-ES.

Hydraulic control: HD8-HH

The valve is supplied as main body.

X and Y connections are used for the hydraulic control of the valve.

8 CONTROLS

Control of the main spool stroke: C

It is possible to introduce special stroke controls in the heads of the hydropiloted valve so as to vary the maximum spool stroke. This solution allows control of the flow rate from the pump to the actuator and from the actuator to the outlet, obtaining a double adjustable control on the actuator. Add the letter **C** to the identification code to request this device.

Control of the main spool shifting speed: D

By placing a double flow control valve between the pilot solenoid valve and the hydropiloted valve, the piloted flow rate can be controlled and therefore the shifting speed can be varied. Add the letter **D** to the identification code to request this device.

Control of the main spool stroke and shifting speed: G

It is possible to have the valve fitted with both the spool stroke device and the piloting flow rate control device. Add the letter **G** to the identification code to request this solution.

9 SPECIAL CONFIGURATION

Solenoid valves with special spools

Besides the standard configurations (see pages 2 and 3), we can develop, on request, connection diagrams with special spools for a wide range of applications: consult our technical department for their identification, feasibility and operating limits.

19C

18C

15C

38C

Check valve incorporated on line P: P

Valve HD8 is available upon request with check valve incorporated on line P. This is particularly useful to obtain the necessary piloting pressure when the main control valve, in the rest position, has line P connected to the T outlet. The cracking pressure is 5 bar. Add P to the identification code for this request.

10 PILOT and DRAIN

The HD8 valves are available with pilot and drain, both internal and external. The version with external drain allows for a higher back pressure on the outlet.

DIRECTIONAL CONTROL VALVES– CETOP 03 proof II 2 GD, Ex d IIC T5

HD3-EX-*

40 l/min 25 MPa (250 bar)

1 DESCRIPTION

Valves HD3-EX are ATEX directional control valve solenoid operated with subplate mounting interface acc. to ISO 4401, DIN 24340 (CETOP 03).

The design of the body is an high quality five chamber casting. The valve is available with ATEX metallic DC and AC solenoids. In the standard version, the valve housing is phosphated for 240 h salt spray protection acc. to ISO 9227 . Enhanced surface protection for specific applications is available (ISO 9227, 520 h salt spray).

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)
HD3	-	EX	-	-	/ 25

(1) HD3 : 4-way directional valve Cetop 03 – Pressure 25 Mpa (250 bar)

(2) EX : electrically controlled, Ex-proof solenoid

(3) Spool type (see 4):

-number is the main spool type

-letter is the solenoid or spring arrangement:

C : 2 solenoids spool is spring centered (3 position)

N : 2 solenoids spool is detented (2 position) see 9

LL : 1 solenoid (a), spool is spring offset (2 position, end to end)

ML: 1 solenoid (a), spool is spring offset (2 position, middle to end)

LM: 1 solenoid (a), spool is spring offset (2 position, end to middle)

(4) Code reserved for option and variants

b: only for LL, ML, LM sol. b installed (instead of sol. a)

S-**: calibrated orifice on P port, see 10

ZT: zinc trivalent plated valve, see 11

(5) Electric voltage and solenoid coils

012C: coil(s) for V12DC

024C: coil(s) for V24DC

110A: coil(s) for V110/50 – V115/60 AC

230A: coil(s) for V220/50 – V230/60 AC

(6) Design number of the valves Atex solenoid for G and D

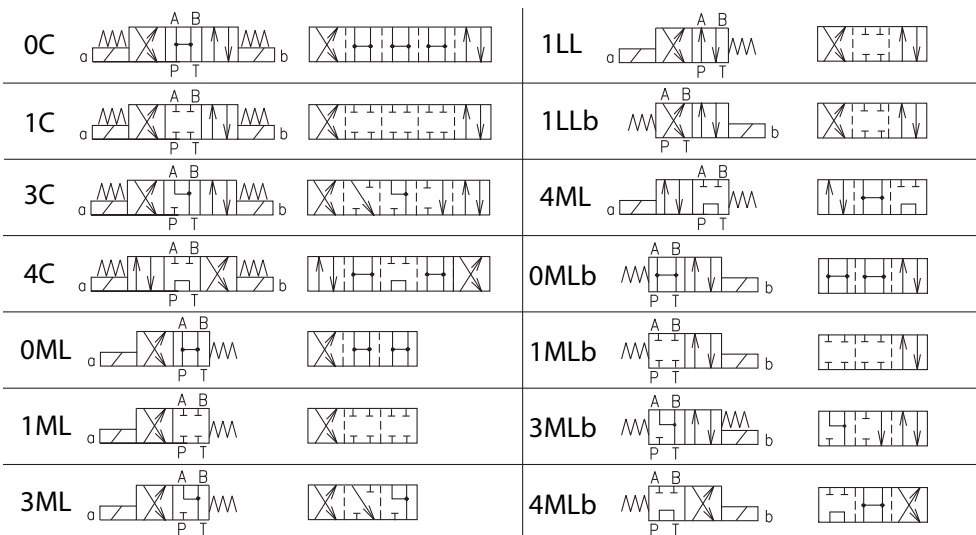

The spool 12 shifts into the valve body 11 subject to the action of springs 13 and solenoids 2. Spool 12, depending from its shape and its position in the valve body, opens and/ or closes passages between P, A, B and T ports, thus controlling the direction of the hydraulic flow.

3 TECHNICAL DATA

Nominal flow	32 l/min	Electric Characteristics: Valves type HD3-EX-* are operated by solenoid that are energized: • directly from a D.C. voltage supply: V 12 DC = 012 C V 24 DC = 024 C • by the use of coils that incorporate a full wave bridge rectifier, from A.C. voltage supply: V 110/50-V 115/60 = 110 A V 220/50-V 230/60 = 230 A Other voltages are available. Permissible supply voltage variation: + 5%. Ex-proof solenoid according to ATEX 94/9/EC, II 2GD, class Exd IIC T5 – see 7 Power consumption: max 11 w. Currents are, at nominal voltage and at 25°C: V12DC = 0,92A V115AC = approx 0,1A V24DC = 0,46A V230AC = approx 0,05A
Maximum rec. flow rate	40 l/min	
Maximum nominal pressure (P,A,B)	25 MPa (250 bar)	
Maximum pressure at T port	25 MPa (250 bar)	
Pressure drops	See 5	
Protection to DIN 40050	IP 67	
Duty cycle	100%	
Service life	≥ 10 ⁷ cycles	
Dimensions and Installation	see 6	
Mass	Approx 2,6 / 3,7 kg	

4 SPOOL IDENTIFICATION AND INTERMEDIATE POSITION TRANSITORIES

Spools, springs and solenoids combination permit to obtain almost every type of ports (P, A, B, T) connection and sequence. For almost all types of solenoids/springs combination and for all type of spools (with the exceptions of spool 4), when solenoid “a” is energized, hydraulic connections are P-> B and A ->T; to obtain P -> A and B-> T solenoid “b” must be energized. The hydraulic connections that are obtained in the “central” (neutral) position when solenoids are not energized is the characteristic mark of the spool shape and from it derives its identification number:

- 0 = P, A, B, T connected
- 1 = P, A, B, T closed
- 3 = P closed, A, B, T, connected.

4ML	4	-	-	4	2
0ML	2	-	-	3	2
3ML	2	-	-	2	-

8 HYDRAULIC FLUIDS

Seals and materials used on standard valves HD3-* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and anti-oxidizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

9 VERSION "N": MECHANICAL DETENT ON SPOOL

Solenoid valves with detent typically are 2 position, 2 solenoid, nospring valve where the spool is kept at the extreme ends of its stroke by a mechanical device. This permits that solenoids are energized by short time current pulses and that the spool remains at its position regardless of forces due to hydrodynamics or gravitational/inertial effects (vibrations).

10 VERSION "S*": CALIBRATED ORIFICE ON P PORT

Option "S*" is represented by elements , suitably shaped to be inserted on P port of the solenoid valve, having a calibrated orifice (of various sizes) able to restrict, at the requested P value, the flow rate entering the solenoid valve. Those elements have the following orifice diameter:

3S - 10 $\varnothing D = 1 \text{ mm}$

3S - 20 $\varnothing D = 2 \text{ mm}$

3S - 25 $\varnothing D = 2,5 \text{ mm}$

and are kept sealed on the P port of the valve by an OR of 9,25x1,78 mm sizes (example OR 110 - 2037).

11 VERSION "ZT": ZINC PLATED VALVES

Solenoid valves according to "ZT" version have central body zinc trivalent plated and protected against every type of corrosion due to saline ambiance or other aggressive chemicals. Zinc thickness are on the valve body: 10-15 μm .

HYDRAULIC SCREW-IN VALVES proof II 2 GD, Ex d IIC T5

EVX-*-C5

25 l/min 25 MPa (250 bar)

1 DESCRIPTION

Valves EVX-*-C5 are ATEX directional control valve in cartridge style poppet type. It is suitable for 2 way metric cavity M22 x 1,5 or cavity SAE 08 . The valve is available with ATEX metallic DC and AC solenoids. The coil is Zinc-nichel coated for an enhanced surface protection (ISO 9227, 520 h salt spray).

Protection according to IEC 144: Class IP67- External surfaces zinc-nichel coated (min. thickness 7 micron)

Connection: 3,5 mm² wire cable (CEI 20-22), length 1,5 m already connected to coil. Electrical connection must be accordance to Ex-proof norm ATEX. Earth connection both internal, with yellow-green wire in the cable, and external with a minimum 4mm² cable fastened to earth screw.

6 FLOW RATES AND PRESSURE DIFFERENTIAL

For a given ΔP on a given valve the flow rates are proportional to the driving current (see 4); for a given driving current on a given valve, the flow rates increase with the increasing of the ΔP up to certain limits. Typical limit curves are:

5 SPOOL IDENTIFICATION AND INTERMEDIATE POSITION TRANSITORIES

9 HYDRAULIC FLUIDS

Seals and materials used on standard valves HD3-* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and anti-oxidizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

10 VERSION "ZC": ZINC PLATED VALVES

Solenoid valves according to "ZC" version have central body zinc plated and protected against every type of corrosion due to saline ambiance or other aggressive chemicals. Zinc thickness are on the valve body: 10-15 μ m.

11 PRESSURE COMPENSATOR MODULES

2-way pressure compensator for meter-in application type AM3-PCP – see table AM-391. When using the 2-way pressure compensators in meter-in application, shown in the circuit diagram, a constant pressure difference across the metering edge of the proportional direction valve is held. In this case, the pressure variations due to loading changes, as well as pump pressure changes, are compensated. That means that a pressure change cannot result in flow increase. 3-way pressure compensator type AM3-LS-P is able to operate as "load sensing" device, by discharging at T port, at the same pressure of the user, the flow that exceeds the flow rates required by the controlled opening of the proportional 4-way valve.

DIRECTIONAL CONTROL VALVES - proof II 2 GD, EEx d IIC T5

HD5-EX

150 l/min 32 MPa (320 bar)

1 DESCRIPTION

HD5-EX-** Ex proof electrically are pilot operated 4 way valves of size ISO 05 with mounting surface according to Cetop 4.2-4 P05-320
 Characteristics of the Ex proof, electrically operated, pilot valve type HD3-EX-** are described on Aidro table HD-3EX rev.

Control of the main spool stroke: C

It is possible to introduce special stroke controls in the heads of the hydropiloted valve so as to vary the maximum spool stroke. This solution allows control of the flow rate from the pump to the actuator and from the actuator to the outlet, obtaining a double adjustable control on the actuator. Add the letter **C** to the identification code to request this device.

Control of the main spool shifting speed: D

By placing a double flow control valve between the pilot solenoid valve and the hydropiloted valve, the piloted flow rate can be controlled and therefore the shifting speed can be varied. Add the letter **D** to the identification code to request this device.

Control of the main spool stroke and shifting speed: G

It is possible to have the valve fitted with both the spool stroke device and the piloting flow rate control device. Add the letter **G** to the identification code to request this solution.

PROPORTIONAL 4-WAY CONTROL VALVES SOLENOID OPERATED

HD3-PS-*

32 l/min 32 MPa (320 bar)

1 DESCRIPTION

Valves HD3-PS are proportional directional control valve with subplate mounting interface acc. to ISO 4401, DIN 24340 (CETOP 03).

The design of the body is an high quality five chamber casting. The valve is available with different spools able to control different flow ranges. In the standard version, the valve housing is phosphated for 240 h salt spray protection acc. to ISO 9227.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)
HD3	-	PS	-	-	/ 10

(1) 4-way directional valve CETOP 03 – Pressure 32 MPa (320 bar)

(2) PS : Proportional electric control

(3) Functional spool type (see 4):

-number is the main spool type

1: closed center (P, A, B, T blocked)

3: P blocked, A, B, T connected

-spool nominal flow

P : 32 l/min with P = 1 MPa (10 bar) (PA+BT or PB+AT)

R : 16 l/min with P = 1 MPa (10 bar) (PA+BT or PB+AT)

05 : 05 l/min with P = 1 MPa (10 bar) (PA+BT or PB+AT)

D : differential $Q_b = 2Q_a$: 32/16 l/min with P = 1 MPa (10 bar)

-letter is the solenoid or spring arrangement:

C : 2 solenoids, spool is springs centred

ML : 1 solenoid (“a”) spool is centred + 1 end position

MLb : 1 solenoid (“b”) spool is centred + 1 end position

(4) Options and variants:

K : extended manual overrides (see 7)

AK : extended manual overrides with air bleeding valves (see 8)

ZC : zinc plated valves (see 9)

(5) Type of coil and supply voltages

R2 : R= 2,3 standard for V12DC; R3 : R= 4,5

R4 : R=13,4 standard for V24DC; R5 : R=18,6

(6) Design number (progressive) of the valve.

The spool 12 shifts in to the valves body 11 subject to the action of springs 13 and proportional solenoid 1. Spool 12, depending from its shape and its position in the valves body 11, opens and/or closes passages between P, A, B, T ports, thus controlling the direction and the rate of the hydraulic flow. Solenoid 1 is energized by electric current flowing-in through cables; in case of electric cut-offs, the spool can be manually shifted by acting on the emergency pins 5, located at the end of the solenoids and accessible through the retaining nuts 10.

3 TECHNICAL DATA

Nominal flow rates	5, 16, 32 l/min	Electric Characteristics: Valves type HD3-PS-* are operated by proportional solenoids that are rated for an average max power of 13,5 w. The values of nominal max. current are: for coils type R2 (2,3 Ω): I max = 2,4 A R3 (4,5 Ω): I max = 1,7 A R4 (13,4 Ω): I max = 1,0 A R5 (18,6 Ω): I max = 0,85 A Currents to hydraulic proportional valves are normally supplied by an electronic driver based on PWM mode of operation, capable of full control of min and max values of current for drivers type UED-*
Maximum nominal pressure (P,A,B)	32 MPa (320 bar)	
Maximum pressure at T port	16 MPa (160 bar)	
Maximum rec. Pressure drops	10 MPa (100 bar) see [8]	
Protection DIN 40050	IP 67	
Duty cycle	100%	
Service life	≥ 10 ⁷ cycles	
Installation and Dimensions	(see [10])	
Mass	Approx 1,6 / 2,1 kg.	

4 SPOOL IDENTIFICATION AND NOMINAL FLOW RATE

5 TYPICAL DIAGRAMS

Typical flow curves of valves HD3-PS-*, with spools type P, R, 05, in standard configuration measured with mineral oil at 36 cSt and at 50°C at $\Delta P=01$ MPa (10 bar) for flow P→B A→T

6 FLOW RATES AND PRESSURE DIFFERENTIAL

For a given ΔP on a given valve the flow rates are proportional to the driving current; for a given driving current on a given valve, the flow rates increase with the increasing of the ΔP up to certain limits. Typical limit curves are:

7 VERSION "K": EXTENDED EMERGENCY PIN

Solenoid valves according to "K" version have extended emergency actuator pins protruding from the solenoid shape, that permit a quick and easy "Hand operation" of the valves, without the need of any tool. The actuator pin and the end of the solenoid are protected by a flexible rubber cap that makes easy operation and protects from moisture and water splashes.

8 VERSION "AK": EXTENDED PIN AND AIR VALVES

Proportional valves according to "AK" version have extended emergency actuator pins that incorporate air bleeding valves, to purge air from the solenoid tube for a simplified start-up of the system. The actuator pin and the end of the solenoid are protected by a flexible rubber cap that makes easy operation and protects from moisture and water splashes.

9 VERSION "ZC": ZINC PLATED VALVES

Solenoid valves according to "ZC" version have central body zinc plated and protected against every type of corrosion due to saline ambiance or other aggressive chemicals. Zinc thickness are on the valve body: 10-15 μ m; and 8/12 μ m on solenoids.

10 INSTALLATION DIMENSIONS (mm)

All valves HD3-* conform with ISO and CETOP specifications for mounting surface dimensions (see also front page) and for valves height. When assembled to its mounting plate valve HD3-* must be fastened with 4 bolts M5 X 45 mm (or M5 x ** according to the number of modules) tightened at 8 Nm torque. Of special interest is the mounting of pressure compensator modules with HD3-P proportional valves. Leakage between valve and mounting surface is prevented by the positive compression on their seats of 4 seals of QUAD/O Ring type 9,25x1,68x1,68.

11 HYDRAULIC FLUIDS

Seals and materials used on standard valves HD3-* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and anti-oxidizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

12 PRESSURE COMPENSATOR MODULES.

2-way pressure compensator for meter-in application type AM3-PCP – see table AM-391. When using the 2-way pressure compensators in meter-in application, shown in the circuit diagram, a constant pressure difference across the metering edge of the proportional directional valve is held. In this case, the pressure variations due to loading changes, as well as pump pressure changes, are compensated. That means that a pressure change cannot result in flow increase. 3-way pressure compensator type AM3-LS-P is able to operate as "load sensing" device, by ischarging at T port, at the same pressure of the user, the flow that exceeds the flow rates required by the controlled opening of the proportional 4-way valve.

PROPORTIONAL 4-WAY CONTROL VALVES SOLENOID OPERATED

HD5-PS-*

63 l/min 32 MPa (320 bar)

1 DESCRIPTION

Valves HD5-PS are proportional directional control valve with subplate mounting interface acc. to ISO 4401, DIN 24340 (CETOP 05). The design of the body is an high quality five chamber casting. The valve is available with different spools able to control different flow ranges. In the standard version, the valve housing is phosphated for 240 h salt spray protection acc. to ISO 9227.

P: 63 l/min with $\Delta P = 1$ MPa (10 bar) (PA+BT or PB+AT)

R: 32 l/min with $\Delta P = 1$ MPa (10 bar) (PA+BT or PB+AT)

D: differential $Q_b = 2Q_a$: 63/32 l/min with $P = 1$ MPa (10 bar)

-solenoid and springs arrangements

C : 2 solenoid, spool is springs centred

ML : 1 solenoid ("a") spool is centred + 1 end position

MLb : 1 solenoid ("b") spool is centred + 1 end position

(4) Options and variants:

K : extended manual overrides(see 7)

AK : extended manual overrides with air bleeding valves (see 8)

ZC : zinc plated valves (see 9)

(5) Type of coils and supply voltages

R1 : $R = 3,78 \Omega$

R2 : $R = 4,7 \Omega$ standard for V12DC;

R4 : $R = 13,9 \Omega$ standard for V24DC;

(6) Design number (progressive) of the valve.

ISO 4401-05-04-0-05
(CETOP 4.2-4-05-320)

The spool 1 shifts in to the valves body 5 subject to the action of springs 4 and proportional solenoid 2 and 3. Spool 1, depending from its shape and its position in the valves body, opens and/or closes passages between P, A, B, T ports, thus controlling the direction and the rate of the hydraulic flow. Solenoid 2 and 3 is energized by electric current flowing-in through cables; in case of electric cut-offs, the spool can be manually shifted by acting on the emergency pins, located at the end of the solenoids and accessible through the retaining nuts.

3 TECHNICAL DATA

Nominal flow rates	32, 63 l/min	Electric Characteristics: Valves type HD5-PS-* are operated by proportional solenoids that are rated for an average max power of 13,5 W. The values of nominal max. current are: for coils type R1 (3,78 Ω): I max = 2,4 A R2 (4,7 Ω): I max = 1,9 A R4 (13,9 Ω): I max = 1,1 A Currents to hydraulic proportional valves are normally supplied by an electronic driver based on PWM mode of operation, capable of full control of min and max values of current for drivers type UED-*
Maximum nominal pressure (P,A,B)	32 MPa (320 bar)	
Maximum pressure at T port	21 MPa (210 bar)	
Maximum rec. Pressure drops	10 MPa (100 bar) (see [6])	
Protection DIN 40050	IP 67	
Duty cycle	100%	
Service life	≥ 10 ⁷ cycles	
Installation and Dimensions	(see [10])	
Mass	Approx 4,3 / 5,8 kg.	

4 SPOOL IDENTIFICATION AND NOMINAL FLOW RATE

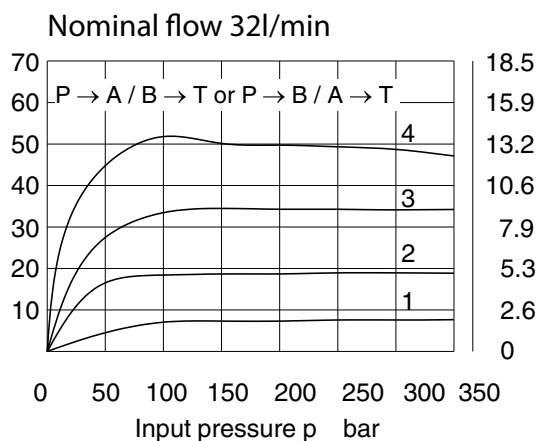

5 TYPICAL DIAGRAMS

6 FLOW RATES AND PRESSURE DIFFERENTIAL

For a given ΔP on a given valve the flow rates are proportional to the driving current; for a given driving current on a given valve, the flow rates increase with the increasing of the ΔP up to certain limits. Typical limit curves are:

7 VERSION "K": EXTENDED EMERGENCY PIN

Solenoid valves according to "K" version have extended emergency actuator pins protruding from the solenoid shape, that permit a quick and easy "Hand operation" of the valves, without the need of any tool. The actuator pin and the end of the solenoid are protected by a flexible rubber cap that makes easy operation and protects from moisture and water splashes.

8 VERSION "AK": EXTENDED PIN AND VALVE AIR BLEEDING

Proportional valves according to "AK" version have extended emergency actuator pins that incorporate air bleeding valves, to purge air from the solenoid tube for a simplified start-up of the system. The actuator pin and the end of the solenoid are protected by a flexible rubber cap that makes easy operation and protects from moisture and water splashes.

9 VERSION "ZC": ZINC PLATED VALVES

Solenoid valves according to "ZC" version have central body zinc plated and protected against every type of corrosion due to saline ambience or other aggressive chemicals. Zinc thickness are on the valve body: 10-15 µm; and 8/12 µm on solenoids.

10 INSTALLATION DIMENSIONS (mm)

All valves HD5-PS-* conform with ISO and CETOP specifications for mounting surface dimensions (see also front page) and for valves height. When assembled to its mounting plate, valve HD5-ES-* must be fastened with 4 fixing bolts (socket head screws to ISO 4762) M6 x 40 mm (or M6 x * according to the number of modules) of class 12,9 (ISO898) tightened at 12 Nm torque. Leakage between valve and mounting surface is prevented by the positive compression on their seats of 5 seals of Quad-Ring type 12,42 x 1,68 x 1,68 mm.

11 HYDRAULIC FLUIDS

Seals and materials used on standard valves HD5-* are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and anti-oxidizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

PILOT OPERATED PRESSURE RELIEF VALVE

PMO-78/*

60 l/min 35 MPa (350 bar)

1 DESCRIPTION

Proportional pressure relief valve in cavity 7/8" 14 UNF.

The valve is available in two configurations: standard, where with no current there is no pressure in the system, and positive where with no current you have the desired pressure in the system.

Valves are normally supplied with coils with integrated quenching diode in order to protect the electronics connected with the valve.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)
PMO	-	78	/	-	

(1) PMO : Proportional pressure relief valve

(2) Function:

no designation : Standard (relief 0 bar with 0 current)
 P: Positive (relief 180 bar with 0 current)

(3) 78: cavity SAE10 (7/8" 14 UNF)

(4) Pressure range:

12: up to 120 bar (1740 PSI)
 21: up to 210 bar (3046 PSI)
 35: up to 350 bar (5076 PSI)

(5) Electric voltage and solenoid coils

012C: coil(s) for V12DC with quenching diode
 024C: coil(s) for V24DC with quenching diode

(6) Coil connection

no designation : DIN 43650-A ISO 4400
 AMP: Amp Junior Timer
 D: Deutsch DT04-2P

The valve is designed for continuous regulation of pressure in the circuit. It is pilot operated from a pilot stage. The increase/decrease of the pressure P in the system is proportional to the energizing current at solenoid. For a self bleeding of the valve it is recommended to install the valve in vertical position with coil on the bottom. If it is not possible, it is necessary to act on the bleeding screw in order to assure a proper function of the valve.

3 TECHNICAL DATA

Nominal flow	50 l/min	Electric characters: Valve type PMO*.78 are operated by solenoid that are energized from a D.C. voltage supply: V 12 DC = 012C V 24 DC = 024C With an appropriate electrical driver in order to control the input current at the valve Coils have an integrated quenching diode and their characteristics are: V 12 DC - limit current 1,0 A - 6,5 Ohm V 24 DC - limit current 0,6 A - 20,8 Ohm
Maximum rec. flow rate	50 l/min	
Maximum nominal pressure	35 MPa (350 bar)	
Optimal dither control	250 Hz	
Valve Hysteresis	<5 %	
Protection	IP 67	
Duty cycle	100%	
Installation and dimension	(see [5])	
Valve Body	Steel	
Mass	0,58 kg	
Note: pressure in T line influences valve performances

6 HYDRAULIC FLUIDS

Seals and materials used on standard valves PMO*.78 are fully compatible with hydraulics fluids of mineral base, upgraded with antifoaming and anti oxidizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

DIRECT OPERATED PRESSURE REDUCING VALVE PRO-M24.* 40 l/min 9 MPa (90 bar)

1 DESCRIPTION

Proportional pressure reducing valve direct operated in cavity M24 x 1,5. The valve is available in different pressure ranges and his robust design permits a stable and reliable functioning. Valves are normally supplied with coils with integrated quenching diode in order to protect the electronics connected with the valve.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)
PMO	-	M24	/	-

(1) PRO:Proportional pressure reducing valve direct operated

(2) M24:metric cavity M24x1,5 (see drawing)

(3) Max. reducing pressure

- 18 bar
- 20 bar
- 30 bar
- 80 bar

(4) Electric voltage and solenoid coils

- 012C: coil(s) for V12DC with quenching diode
- 024C: coil(s) for V24DC with quenching diode

(5) Coil connection:

- AMP: Amp Junior Timer
- D: Deutsch DT04-2P

The valve is designed for continuous regulation of pressure in the circuit. It is direct operated. The increase/decrease of the pressure P in the system is proportional to the energizing current at solenoid. The reduced pressure is defined by coil current as shown on the static pressure characteristic.

3 TECHNICAL DATA

6 HYDRAULIC FLUIDS

Seals and materials used on standard valves PRO-78 are fully compatible with hydraulics fluids of mineral base, upgraded with antifoaming and anti oxidizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

UNIVERSAL ELECTRONIC DRIVER UED-* for solenoid operated proportional valves

1 DESCRIPTION

The driver controls one or two solenoids of a proportional valve. Its construction permits an easy assembly directly on the DIN rail of the electric cabinet. By the use of two selectors it is possible to easily configure all the parameters without the need of special tools or programming devices.

A 4 digit led display shows all the necessary informations.

- Microcontroller design
- Independent adjustments (ramp up - ramp down)
- 4 digit led display
- Display and adjust actual values (current & voltage)
- Easy access to the menu setup
- Wide ramp time range
- Simple control with analog input, locally supplied reference voltage
- No heat sink required
- Electronic limiting circuit/short circuit proof
- Reverse polarity, command input protection
- Load can be connected and disconnected live

2 ORDERING CODE

(1)	(2)
UED	-

(1) UED: Universal Electric Driver for Proportional valves

(2) Configuration:

- S: for single solenoid proportional valves
- D: for double solenoid proportional valves

3 SET UP PROCEDURE

Available input selection UED-S	Available input selection UED-D
	DIP Switch in ON/UP position
"in" :10 -->(0 to 10V) ** default	"in" :10 -->(0 to 10V) ** default
"in" :5 --> (0 to 5V)	"in" :5 --> (0 to 5V)
"in" :420 --> (4 to 20 mA)	"in" :420 --> (4 to 20 mA)
	DIP Switch in OFF/Down position
	"in" : -10 -->(-10 to 10V)

(1) At power up, the display will show either the output current signal or the input signal (Default display setting shows the output signal).
The decimal point will be flashing.

(2) Rotate SELECT to enter the set-up mode. Parameter abbreviation is indicated on the display

(3) When you reach the setting you want to modify, rotate ADJUST up or down to the desired value.

(4) To modify another setting, rotate SELECT again and repeat.

(5) The Driver is fully functional during the set-up procedure with any adjustments effective immediately.

(6) In order to write the new settings in the memory and return to normal mode of operation, rotate „SELECT“ until the display shows „SR“ and then rotate „ADJUST“ from 0 to 1 or wait for 100 seconds.

(7) If you do not want to save the new settings you have just modified, you must disconnect the Driver from the power supply before the end of the 100 seconds to restore precious settings.

(8) After saving parameters to memory, the decimal point will be flashing and the Driver display will be back showing either the output current signal or input signal depending on your „di“ selection.

(9) To start over completely, you can restore the factory settings by rotating SELECT to rFP and then rotate ADJUST up past 10 for the display to reset (NOTE for Step 9: you may have to adjust your Input Signal Setting again if you reset to factory settings.)

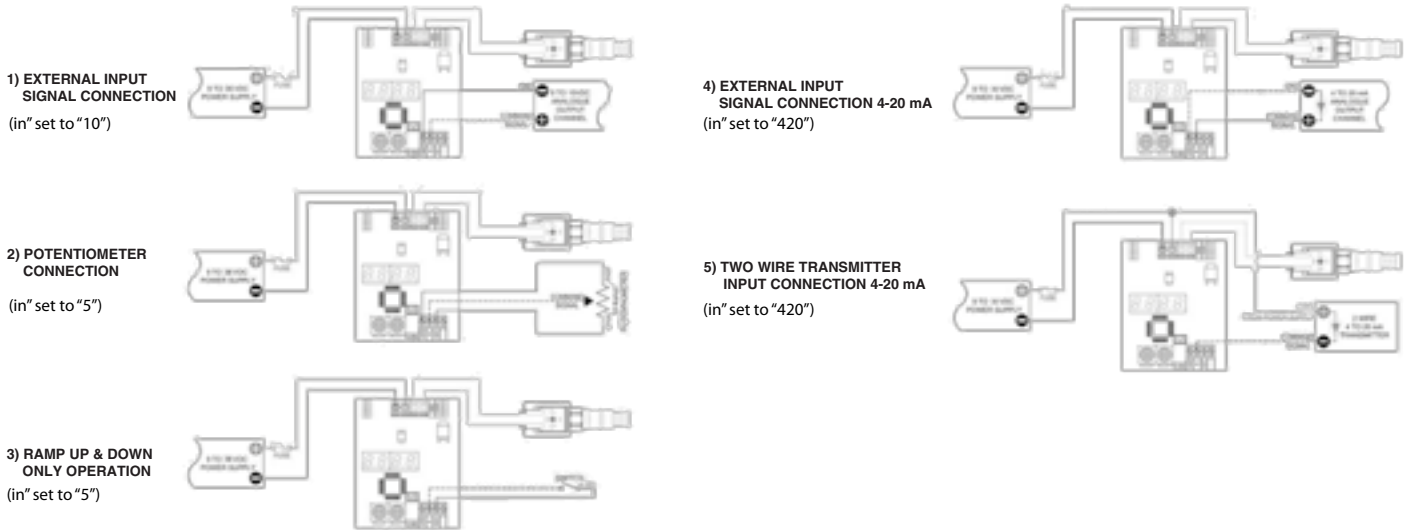

4 TECHNICAL DATA

Operating voltage:	9-36 V DC
Maximum output current:	3,00 A
Input signal:	0-5 V; 0-10V; 4-20 mA
Maximum ramp time:	99,5 s
Linearity:	40-450 Hz
Operating Temperature:	-40 .. 80 °C
Mounting:	DIN rail (open)

5 SETTING RANGES

Parameter	Description	Adjustable Range

1 DESCRIPTION

The valve is 2 way NC poppet type and full optional. It is complete with filter, manual override screw type, protection cover for the manual override. With his design, it is possible to use the valve with standard coils suitable for AC and DC current without the need of special connectors with integrated rectifiers.

EVSC	-	34	-	02	-	-

(1) EVSC : screw in directional solenoid valve with Ø 13 mm solenoid core (see 5),
2 way, 2 position, poppet type, normally closed, one direction flow

(2) 34 : cavity 3/4" 16 UNF (Ø 12,7 mm)

(3) 02 : filter and manual override of screw type

(4) Electric voltage and solenoid coil (see 8)

- 0000: no coil
- 012C: coil for V 12 DC
- 024C: coil for V 24 DC
- 220R: coil for V 220-230 RAC
- 230/50:coil for V 230/50 AC

(5) Options for coils connections

- no designation: standard connection ISO 4400 / DIN 43650/A
- C: flying leads
- A: AMP Junior

(6) Options for ISO 4400 / DIN 43650/A connectors

- B9: standard connector, black PG9
- D9: black connector, with diode, PG9
- ES: "energy saving" connector with LED
- R*: rectifier bridge
- L*: LED
- V*: LED + varistor

(7) Protective cap on manual override: P

The poppet 7 is pilot operated and it is kept normally closed against its seat 8. When the solenoid is energized, the mobile armature 5 and the pilot pin 17 are shifted and the poppet, unbalanced by pressure, opens permitting flow from 1 to 2. The manual override 1 is of screw type and permits the valve operation in case of electric failure. The filter 18 (0,25 mm) prevents from dirt and better diffuses the flow around the poppet. The cap 2 protects from shocks the manual override and, if locked, may prevent undue tampering of the valve.

3 TECHNICAL DATA

Max. nominal pressure	25 MPa (250 bar)	Electric Characteristics: Those solenoid valves are normally equipped by coils type C30, which are energized from DC or AC supply. Coils type C30-***C are DC energized directly from a V***DC supply. Coils type C30-***R are RAC (Rectified Alternate Current) energized from a V***AC supply, by a full wave bridge rectifier incorporated in the connector. Solenoids valves type EVSC.34 can also be AC energized, directly from a V***AC supply, by using appropriate C30-***/50 or C30-***/60 coils. Coils type C30 are normally provided for use of ISO 4400 / DIN 43650/A connectors. For coils with different connection to the power supply, see table C30
Nominal flow rate	32 l/min	
Max. rec. flow rate	40 l/min	

4 INSTALLATION DIMENSIONS (mm)

EVSC.34 valves are to be installed in cavity 3/4" 16 UNF with Ø 12,7 mm. Check the appropriate state and position of the seals supplied with the valve :

- O-Ring 9,25 x 1,78 with parbak 9,91 x 1,35
- O-Ring 16,36 x 2,20
- 2 x O-Ring 12,42 x 1,78

Screw the valve in the cavity and lock it with a torque of about 45 Nm applied on the 24mm hexagon.

5 TYPICAL DIAGRAMS

(measured at $v=46$ cSt and 40°C)

6 CONNECTORS

Standard coils are compatible with KA-132 connectors; for some functions (R^* = bridge rectifier; L^* = LED, etc.) the voltage has to be specified:

$$1 = V12 - V24 \quad 2 = V115 \quad 3 = V230$$

The "energy saving" connectors (option ES) save current consumption to less than 50% of the nominal and strongly reduce warming up of the coils.

7 COILS TYPE C30 (Ø 13mm)

**SCREW IN, 2-WAY SOLENOID OPERATED POPPET VALVES NORMALLY CLOSED,
CAVITY 3/4" 16 UNF Ø 15,87 mm ONE DIRECTIONAL FLOW**

EVSC.34/2.02
32 l/min 25 MPa (250 bar)

1 DESCRIPTION

The valve is 2 way NC poppet type and full optional. It is complete with filter, manual override screw type, protection cover for the manual override. With his design, it is possible to use the valve with standard coils suitable for AC and DC current without the need of special connectors with integrated rectifiers. This valve has a special design with a 3/4" 16 UNF thread but with a 15,87 mm nose thus permits a lower pressure drop. A special dual seal ring on the nose permits an efficient and reliable sealing system.

C36-220R	V 220-230 RAC	0,11	1720	22,3	

8 VARIANTS

01 and 02: filter (0,25 mm) on way prevents from dirt and better diffuses the flow around the poppet. 02 and 04 : manual override is of pin type. Push the pin to shift the poppet and open (flow between 1 to 2); release the pin to reinstall the condition of normally closed poppet (no flow between 1 and 2).

**SCREW IN, 2-WAY SOLENOID OPERATED POPPET VALVES NORMALLY CLOSED, BI-DIRECTIONAL CONTROL
CAVITY 3/4" 16 UNF Ø 15,87 mm**

EVD2.34/2

25 l/min 21 MPa (210 bar)

1 DESCRIPTION

The valve is 2 way poppet type direct operated. It is available also with manual override. It is possible to use the valve with standard coils suitable DC or RAC (rectified alternat current) for AC supply.

A special dual seal ring on the nose permits an efficient and reliable sealing system.

This valve has a special design with a 3/4" 16 UNF thread but with a 15,87 mm nose thus permits a lower pressure drop.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)	(7)
EV	D2	- 34	/ 2	-	-	-

(1) EV : screw-in directional solenoid valve with Ø 13 mm solenoid core (see 4), 2 way, 2 position

(2) D2 : poppet type, normally closed, BI-directional-control

(3) 34 : cavity 3/4 " 16 UNF

(4) 2: with Ø 15,87 mm nose

(5) 02: filter and manual override

(6) Electric voltage and solenoid coils (see 3, see 6)

0000: no coil

012C: coil for V12DC

024C: coil for V24DC

220R: coil for V220-230 RAC

(7) Options for coil connection

no designation: standard connection ISO4400/DIN 43650/A

C: flying leads

A: AMP Junior

D: deutsch

(8) Options for ISO4400/DIN 43650/A connectors

B9: standard connector, black PG9

D9: black connector, with diode, PG9

ES: "energy saving" connector with LED

R*: rectifier bridge

L*:LED

V*:LED+varistor

The poppet 6 is balanced by pressure and it is kept normally closed against its seat 7 by spring 12. When the solenoid is energized, the mobile armature moves against spring 12 the poppet 6, thus permitting flow from 2 to 1 and from 1 to 2. The manual override is of the pin type and, when pushed, it permits the valve's operation in case of electric failure. The filter (0,25 mm) on way 2 prevents from dirt and better diffuses the flow around the poppet.

3 TECHNICAL DATA

Max. nominal pressure	21 MPa (210 bar)	Electric Characteristics: Those solenoid valves are normally equipped by coils type C36, which are energized from DC or AC supply. Coils type C36-***C are DC energized directly from a V***DC supply. Coils type C36-***R are RAC (Rectified Alternate Current) energized from a V***AC supply, by a full wave bridge rectifier incorporated in the connector. Coils type C36 are normally provided for use of ISO 4400 / DIN 43650/A connectors. For coils with different connection to the power supply, see table C36
Nominal flow rate	16 l/min	
Max. rec. flow rate	25 l/min	
Dimension and installation	see 4	

4 INSTALLATION DIMENSIONS (mm)

EVD2.34/2 valves are to be installed in cavity 3/4" 16 UNF with Ø 15,87 mm. Check the appropriate state and position of the seals supplied with the valve:

- Dual seal 12,7x1,8x3
- O-ring 16,36x2,20
- 2 x O-ring 13 x 2

Screw the valve in the cavity and lock it with a torque of about 45 Nm applied on the 24mm hexagon.

7 CONNECTORS

Standard coils are compatible with KA-132 connectors (see table) ; for some functions (R*= bridge rectifier. L*= LED , etc.) the voltage has to be specified :

1 = V12 - V24 2 = V115 3 = V230

The "energy saving" connectors (option ES) save current consumption to less than 50% of the nominal and strongly reduce warming up of the coils.

5 PRESSURE DROPS

Measured at 46 cSt and 40°C.

6 COILS TYPE C36 (Ø 13mm)

Coils DIN	voltage DC	nominal current (A)	resistance 20° C (Ω)	nominal power (W)	insulation class

ES : "energy saving" connector with LED
R* : rectifier bridge; L*:LED; V*:LED+varistor

Light line

High performance

Screw-in 4/2 solenoid valves type EV4** .34 are composed by a valve sleeve 1, a control spool 2, a return spring 3, and an actuating assembly 4 that comprises the magnetic parts and the screwing section. An energizing electric solenoid coil 5 is fastened to the assembly by means of a retaining nut 6. When solenoid coils is energized, a magnetic mobile armature shifts and by means of a rod installed inside assembly, moves the control spool which makes hydraulic connections between 1, 2, 3, 4 ports.

3-P: 1-T 2-A: 4-B

3 TECHNICAL DATA

Max. nominal pressure	25 MPa (250 bar)	Electric Characteristics:
Nominal flow rate	16 l/min	Those solenoid valves are normally equipped by coils type C36, which are energized from DC or AC supply. Coils type C36-***C are DC energized directly from a V***DC supply. Coils type C36-***R are RAC (Rectified Alternate Current) energized from a V***AC supply, by a full wave bridge rectifier incorporated in the connector. Coils type C36 are normally provided for use of ISO 4400/DIN 43650/A connectors. For coils with different connection to the power supply, see table C30/36.
Max. rec. flow rate	20 l/min	
Dimension and installation	see 4	
Duty cycle	ED100%	
Mass (without coil)	0,20 kg	

4 INSTALLATION DIMENSIONS (mm)

EV4*.34 valves are to be installed in cavity 3/4" 16 UNF. Check the appropriate state and position of the seals, screw the valve in the cavity and lock it with a torque of about 45 Nm applied on the 24 mm hexagon.

6 VARIANTS OF MANUAL OVERRIDE

5 TYPICAL DIAGRAMS

LIGHT LINE

HIGH PERFORMANCE

7 CONNECTORS

Standard coils are compatible with KA-132 connectors; for some functions (R* = bridge rectifier, L* = LED, etc.) the voltage has to be specified :

1 = V12 V24 2 = V115 3 = V230

The "energy saving" connectors – option ES – save current consumption to less than 50% of the nominal and strongly reduce warming up of the coils.

8 COILS type C36 (Ø 13 mm)

SCREW IN POPPET CHECK VALVE CAVITY 3/4" 16 UNF

VUC-34*

40 l/min 35 MPa (350 bar)

1 DESCRIPTION

VUC is a poppet check valve in standard cavity 3/4" 16UNF.
The external surface is zinc coated.
The tightness is guarantee by high precision machining parts and by the poppet design.
Different cracking pressure available on demand.

2 ORDERING CODE

(1)	(2)	(3)
VUC	- 34	-

- (1) VUC: check valve
- (2) 34: cavity 3/4" 16 UNF (ø 12,7 mm)
- (3) Cracking pressure
 - no designation: 3 bar (standard execution)
 - 1: 8 bar

3 TECHNICAL DATA

Maximum flow	40 l/min
Maximum pressure	350 bar (35 MPa)
Installation torque	40-45 Nm
Weight	0,06 Kg

4 TYPICAL DIAGRAMS

Valve is designed as simple lock or load-holding device. Flow is free from 1 to 2 and valve opens against the force of the spring. In the direction 2 -1 the flow is blocked and not permitted. Tightness is assured by high quality poppet made in hardened steel.

HYDRAULIC SCREW-IN VALVES PRESSURE RELIEF-DIRECT ACTING MO-010

16 l/min 25 MPa (250 bar)

1 DESCRIPTION

MO-010 is a direct operated pressure relief valve in standard cavity 3/4" 16UNF.

The external surface is zinc coated. With a single pressure setting is it possible to cover a wide range of regulations. The simple design is perfect for application with low flow rates such as mini power units.

2 ORDERING CODE

HYDRAULIC SCREW-IN VALVES FLOW CONTROL-ADJUSTABLE FT266/VCF

20 l/min 35 MPa (350 bar)

1 DESCRIPTION

It is possible to choose different type of flow regulators in standard cavity 3/4" 16UNF.

FT266/5 has a fine control in one direction. FT266/2 controls both flow directions. In these two models the regulation is made by a precision hand-grip with locking screw.

The model VCF-34 is always a bi-directional flow control valve but suitable for lower flow rates and without hand knob.

HYDRAULIC SCREW-IN VALVES PRESSURE RELIEF-DIRECT ACTING MO-4L

70 l/min 25 MPa (250 bar)

1 DESCRIPTION

Suitable for standard cavity 7/8" 14 UNF 2-way direct acting relief valves
Differential area poppet type Fast response and low hysteresis in shutting
Maximum operating pressure: 250 bar Maximum flow rate: 70 l/min Ex-
ternal parts zinc plated Steel body Poppet in tempered and grinded steel
Anti vibration system Mass 0,13 kg

2 ORDERING CODE

(1)	(2)	(3)
MO	- 4L	/ 20

(1) MO: Direct acting relief valve

(2) 4: Nominal size (7/8" 14 UNF)

(3) 20: Spring type, setting 110 to 220 bar increase (bar/turn) 31.5

3 TECHNICAL DATA

Max working pressure	250 bar
Max flow	70 l/min
External parts zinc plated	

Normally the poppet (with damping spool) is kept closed by compression spring. When, on P port, pressure exceeds the settled value, poppet is pushed by axial hydraulic forces, overcomes the force of spring, shifts in its cylindrical seat and opens to the pressurized fluid annular passage to T, thus keeping the pressure level at the requested value.

4 TYPICAL DIAGRAMS

5 ADJUSTMENT OF THE RELIEF PRESSURE

Relief pressure is reached when the axial hydraulic forces on poppet equal the force on spring; The value of the relief pressure can be therefore changed by changing the compression of the spring. To increase the relief pressure, turn clockwise the adjustment nut , after having unlocked the retaining nut.

Screw-in 4/2 solenoid valves type EV4**.78 are composed by a valve sleeve 1, a control spool 2, a return spring 3, and an actuating assembly 4 that comprises the magnetic parts and the screwing section. An energizing electric solenoid coil 5 is fastened to the assembly by means of a retaining nut 6. When solenoid coils is energized, a magnetic mobile armature shifts and by means of a rod installed inside assembly, moves the control spool which makes hydraulic connections between 1,2,3,4 ports.

3 TECHNICAL DATA

Nominal flow rate	32 l/min	Electric characteristics:
Maximum rec. flow rate	40 l/min	Those solenoid operated valves are normally equipped by coils type B02, which are energized: directly from a D.C. voltage supply
Maximum pressure	25 MPa (250 bar)	V 12 DC = 012C
Installation and dimensions	see 7	V 24 DC = 024C
Duty cycle	ED 100%	by the use of coils that incorporate a full wave bridge rectifier, from A.C. voltage supply :
Mass (without coil)	0,25 kg	V 110/50 - V 115/60 = 115A
		V 220/50 - V 230/60 = 230A

4 TYPICAL DIAGRAMS

5 HYDRAULIC LIMIT OF USE

6 CONNECTORS

All connectors must conform to ISO 4400 (DIN 43650) and electric circuitry must be able to carry the following rated current values :

V 12 DC = 2,4 A V 115/50 = 0,26 A

V 24 DC = 1,2 A V 230/50 = 0,14 A

Coils with 2 electric pins, conforming with AMP connectors, are only available for DC supply (example of code : B02-012C AMP).

7 INSTALLATION DIMENSIONS

Standard valve

8 VARIANTS OF MANUAL OVERRIDE

EV4** .78 valves are to be installed in cavity 7/8" 14 UNF. Check the appropriate state and position of the seals, screw the valve in the cavity and lock it with a torque of about 40 Nm applied on the 27 mm hexagon.

MAXIMUM PRESSURE VALVE DIRECT-ACTING

MO-2/**

30 l/min 35 MPa (350 bar)

1 DESCRIPTION

MO-2 is a direct operated pressure relief valve in a special cavity 3/4" 16UNF but with larger nose thus with better performances. The external surface is zinc coated. There are three different pressure settings for a more accurate regulation.

2 ORDERING CODE

(1)	(2)	(3)
MO	- 2 /	

(1) MO: pressure valve

(2) 2: nominal size

(3) Pressure ranges:

10: min-max operating pressure 20-130bar, 16,5 l/min

20: min-max operating pressure 40-220bar, 25,5 l/min

32: min-max operating pressure 60-350bar, 51 l/min

3 TECHNICAL DATA

Maximum nominal pressure	35 MPa 350 bar
Maximum rec. flow rate	30 l/min
Mass	0,13 Kg

4 TYPICAL DIAGRAMS

5 INSTALLATION DIMENSIONS

SCREW-IN CARTRIDGE DIRECT-ACTING RELIEF VALVE

MO-3/*

30 l/min 35 MPa (350 bar)

1 DESCRIPTION

MO-3 is a direct operated pressure relief valve in a special metric cavity M20x1,5.

The external surface is zinc coated.

There are three different pressure settings for a more accurate regulation.

The valve is designed with an anti vibration system

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)		
MO	-	3	/	-	-	/	01

(1) MO: screw-in cartridge relief valve

(2) 3: nominal size
nominal flow rate = 0,5 dm³/s (approx 32 l/min)

(3) Pressure adjustment ranges:
10: from 2,5 MPa to 12,5 MPa (from 25 to 125 bar)
20: from 2 MPa to 25 MPa (from 40 to 250 bar)
32: from 10 MPa to 32 MPa (from 100 to 320 bar)

(4) code reserved for variants to the adjustment (knob, handwheel, etc.)

(5) code reserved for special variants (materials, seals, surface treatments etc.)

(6) 01: Design number (progressive) of the valve

3 TECHNICAL DATA

Maximum pressure range	see 2	Adjustement of the relief pressure:
Maximum rec. flow rate	40 l/min	relief pressure is reached when the axial hydraulic forces on piston 3 equal the force of spring 5; the value of the relief pressure can be therefore changed, within the limits of the chosen adjustment range, by changing the compression of spring 5. to increase the relief pressure, turn clock wise the adjustment screw 4 after having unlocked ist nut 6. Fore each pressure adjustment range, the pressure gradient is approx: M0-3/10: 1,6 MPa/mm (24 bar/turn)
Nominal flow rate	32 l/min	M0-3/20: 3,2 MPa/mm (48 bar/turn)
Pressure relief curves	see 4	M0-3/32: 5 MPa/mm (75 bar/turn)
installation and dimensions	see 5	when the required level of pressure is reached, lock the nut6.
mass	appron 0,17	Valve type M0-3/* are normally factory tested and settled, with Q=0,1 dm3/s (6 l/min) at the following pressures. M0-3/10: 10 MPa (100bar) (±10%) M0-3/20: 20 MPa (200bar) (±10%) M0-3/ 32: 32 MPa (320bar) (±5%)

4 TYPICAL DIAGRAMS

Typical curves for valves M0-3/* in standard configuration, with mineral oil at 36 cSt a 50°C

5 INSTALLATION DIMENSIONS

6 HYDRAULIC FLUIDS

Seals and materials used on standard valves are fully compatible with hydraulic fluids of mineral oil base, upgraded with antifoaming and antioxidizing agents. The hydraulic fluid must be kept clean and filtered to ISO 4406 class 19/17/14, or better, and used in a recommended viscosity range from 10 cSt to 60 cSt.

Cartridge valves type M0-3/* must be installed in exactly machined cavities obtained in metallic bodies of strenght suitable to sustain the hydraulic efforts. When installing the valve care must be paid not to damage seal (OR 121-15,88x2,62-70 Sh) and to screw-in the valve by applying the appropriate torque of approx. 60Nm to the exagonal CH 22.

FLOW CONTROL VALVE TYPE

FT243/5-38

20 l/min 25 MPa (250 bar)

1 DESCRIPTION

Those valves are to be mounted in very simple cavities M18x1 (see drawing) and give free flow in one direction and adjustable controlled flow on the reverse direction.

4/2 and 4/3 DIRECTIONAL CONTROL VALVES PILOT OPERATED

ASMC

0001

aidro
hydraulics

Mini Power Pack

ASMC

15 l/min 20 MPa (200 bar)

1 DESCRIPTION

ASMC are compact power packs designed in order to be flexible and configurable following the hydraulic scheme of the final application.

It is based on the HDF valve series and because of that, it is possible to configure many different functions, with directional valves, pressure and flow control, hand pumps and so on. It is possible to have the power pack with AC or DC motors with different power limits.

On demand is possible to have plastic tanks and also custom configurations. For this special request please ask to our technical department.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)
ASMC	-	-	-	/ *

See some examples of combinations and possible hydraulic circuits assembled with Aidro HDF valves

(1) ASMC: Aidro small power pack

(2) Tank Nominal capacity:

02 = 2 l (dm³)

04 = 4 l (dm³)

08 = 8 l (dm³)

10 = 10 l (dm³)

(3) Pump code = displacement:

08 = 0,8 cm³/rev

12 = 1,2 cm³/rev

16 = 1,6 cm³/rev

25 = 2,5 cm³/rev

36 = 3,6 cm³/rev

44 = 4,4 cm³/rev

58 = 5,8 cm³/rev

(4) Engine code = combination electric motor/installed power (see 4):

055AC3 = 0,55 kW and Three Phase 400V AC

075AC3 = 0,75 kW and Three Phase 400V AC

110AC3 = 1,10 kW and Three Phase 400V AC

055AC1 = 0,55 kW and Mono Phase 230V AC

075AC1 = 0,75 kW and Mono Phase 230V AC

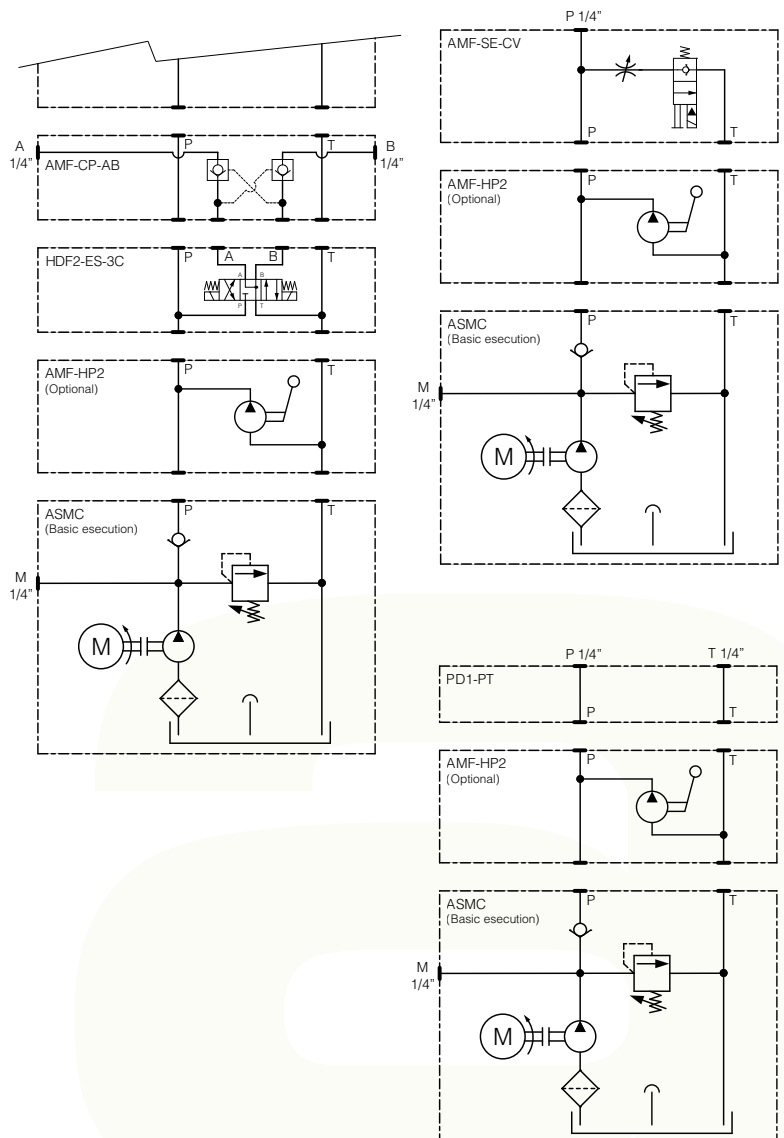

110AC1 = 1,10 kW and Mono Phase 230V AC

120DC24 = 1,20 kW and Direct current 24V DC

150DC12 = 1,50 kW and Direct current 12V DC

200DC24 = 2,00 kW and Direct current 24V DC

(5) Options: code reserved for identification of the specific hydraulic scheme of the customer

3 TECHNICAL DATA

Protection class motors	IP 55F for AC motors ; IP 43 F for DC motors
Ports	A,B : G 1/4"
Fluids	Hydraulic oils (HL, HLP) to DIN 51524 Oil
Recommended viscosity	20 .. 100 mm ² /s
Fluid contamination class	Class 21/18/15 according to ISO 4406 (1999)
Fluid temperature	0 .. +70 °C
Ambient temperature	-25 .. +50 °C

4 COMBINATIONS ELECTRIC MOTOR / INSTALLED POWER

Engine Power	Motor Type	AC3 [400V]		AC1 [230/50Hz]		DC12 [12V]		DC24 [24V]	
		055	0,55 kW 1390 rpm		0,55 kW 1370 rpm

The nominal pressure is the maximum working pressure allowed without time limit.

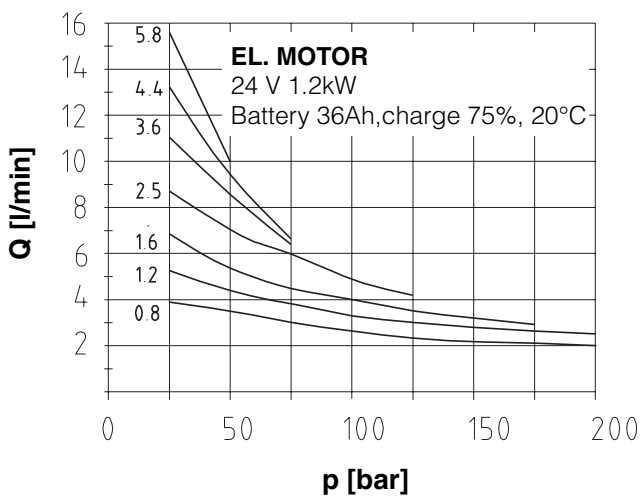

The maximum pressure is the maximum permissible pressure for a short period of time (max time is 20 sec):

250 bar= Maximum pressure for all pumps, except for pump code 58 which maximum pressure is 200 bar

Example of power pack code: type ASMC, tank by 10 l, pump 2,5 cm³/rev, engine power 0,55 Kw 400V AC = ASMC-10-25-055AC3

6 COMBINATIONS MOTOR / PUMP for DC motors

Power pack	Tank nominal capacity	Pump code	ENGINE CODE					
			120DC24 3200 rpm		150DC12 2400 rpm		200DC24 2100 rpm	
			bar	l/min	bar	l/min	bar	l/min
ASMC	2-10 l	08-58	0-200	2-16	0-200	3-16	0-200	3-16

Example of power pack code: type ASMC, tank of 8 l, Pump 1,2 cm³/rev, engine power 1,5 Kw 12V DC = ASMC-08-12-150DC12

DIAPHRAGM PRESSURE SWITCH WITH SETTING SCREW A-573-*

1 DESCRIPTION

Screw in diaphragm pressure switch with setting screw.
The body is in steel zinc plated and it is available with different pressure ranges and settings.
A rubber cover cup protects the electric contacts.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)	(6)
A-573	-				

(1) A-573: diaphragm pressure switch

(2) Regulation setting:

1:	0,2 - 1 bar
2:	0,5 - 2 bar
10:	1 - 10 bar
20:	10 - 20 bar
50:	20 - 50 bar
200:	50 - 200 bar
300:	20 - 300 bar

(3) preset at:

59 bar
120 bar

(4) Type of contact

NO: Normally open
NC: Normally closed

(5) Thread:

G18: G1/8"
G14: G1/4"

(6) Code reserved for special variants

O: Additional o-ring and body with o-ring groove
D: pressure setting when system pressure falling
U: pressure setting when system pressure rising

3 TECHNICAL DATA

Max current	36V - 0,5 Amp
Maximum pressure	250 bar (25 MPa)
Protection	IP64 with rubber cover cap
Mechanical life	10 ⁶ cycles
Diaphragm	NBR
Body	Zinc plated steel

PRESSURE SWITCH WITH SETTING SCREW A-P27HP-*

1 DESCRIPTION

Screw in diaphragm pressure switch with setting screw.
The body is in steel zinc plated and it is available with different pressure ranges and settings.
The electrical connection is assured by a DIN connector with an IP65 protection degree.

2 ORDERING CODE

(1)	(2)	(3)	(4)	(5)
A-P27HP	-		/	

- (1) A-P27HP:
piston pressure switch
- (2) regulation setting
50:20 - 50 bar
300:20 - 300 bar
- (3) Type of contact
NO:Normally open
NC:Normally closed
- (4) Thread:
G18:G1/8"
G14:G1/4"
- (5) Code reserved for special variants

3 TECHNICAL DATA

Max current	250 V DC - 0,5 Amp
Maximum pressure	600 bar (60 MPa)
Protection	IP65
Mechanical life	10 ⁶ cycles
Piston	steel
Body	Zinc plated steel
Hysteresis	15% setting point
Tolerance	8% setting point

SEQUENCE VALVE POPPET TYPE in line mounting type CPR-LG38/*

1 DESCRIPTION

Valve is designed as simple in line valve with relief and anti-cavitation function. When the pressure at the inlet 1 reaches the set value, the poppet starts to open to 2. If there is any load on the side 2, the valve body shifts against a soft spring opening the passage from 2 to 1.

2 ORDERING CODE

(1)	(2)	(3)	(4)
CPR	- LG38 /	-	-

(1) CPR: Anti-cavitation valve

(2) LG38: In line mounting - G3/8

(3) Pressure range (bar)
 6,3 :20-70 bar
 12 :71-130 bar
 20 :131-210 bar
 25 :211-280 bar
 32 :281-350 bar
 40 :351-420 bar

(4) required pressure setting (bar)

3 TECHNICAL DATA

Max flow	60 l/min
Maximum pressure	420 bar (42 MPa)
Max internal leakage	1,00 cc/min
Cracking pressure	0,5 bar
Weight	0,187 Kg

Back pressure on the port 2 is directly additive to the valve setting at a 1:1 ratio

4 TYPICAL DIAGRAMS

ANTI CAVITATION VALVE POPPET TYPE METRIC CAVITY M18X1,5 CPR-M18/*

1 DESCRIPTION

Valve is designed as simple insert cartridge valve with relief and anti-cavitation function. When the pressure at the inlet 1 reaches the set value, the poppet starts to open to tank 2. If there is any load on the side 2, the valve body shifts against a soft spring opening the passage from 2 to 1.

2 ORDERING CODE

(1)	(2)	(3)	(4)
CPR	-	LG38	/

(1) CPR: Anti-cavitation valve

(2) LG38: In line mounting - G3/8

(3) Pressure range (bar)
 6,3 :20-70 bar
 12 :71-130 bar
 20 :131-210 bar
 25 :211-280 bar
 32 :281-350 bar
 40 :351-420 bar

(4) required pressure setting (bar)

3 TECHNICAL DATA

Maximum flow	60 l/min
Maximum pressure	420 bar (42 Mpa)
Installation torque	35-40 Nm
Weight	0,06 Kg

Coining of the cavity is recommended for a proper installation.
Back pressure on the port 2 is directly additive to the valve setting at a 1:1 ratio

4 TYPICAL DIAGRAMS

**HYBRID SAE CARTRIDGE Poppet Type
EVMD.78.**
35 l/min - 25 MPa (250 bar)**

1 DESCRIPTION

Solenoid operated, 2-way 2-positions, normally closed, direct acting poppet type, bi-directional blocking, screw-in cartridge valve. Special design for low leakage in load holding applications. When the coil is de-energized, the EVMD.78.04 blocks flow in both directions. Once the coil is energized, the valve's poppet opens and allows free flow from 1 to 2 and from 2 to 1.

The rigid design using a 1-piece body contributes to minimize the effect of eccentricities in cavity and provides great reliability.

Low pressure drop thanks to optimized flow path.

2 ORDERING CODE

(1)	(2)	(3)	(4)
EVMD	78	-	*

(1) EVMD : screw-in directional solenoid valve, double poppet direct operated

(2) 78: cavity 7/8" 14 UNF

(3) Valves variants

03: Without manual override

04: Manual override push pin

(4) *: Electric voltage and solenoid coils: see **8**

0000: no coils

012C: coils for V12DC

024C: coils for V24DC

All external surfaces are zinc plated and corrosion-proof. All valve parts are made of high strength steel. Poppet is hardened and ground to ensure minimal wear and extended service life. Coil seals protect the solenoid system. Manual override option. Industry SAE common cavity.

3 TECHNICAL DATA

Max flow	35 l/min
Maximum pressure	250 bar (25 MPa)
Max internal leakage	max 5 drops/min 250 bar
Weight	0.225 kg

4 TYPICAL DIAGRAMS

6 ELECTRIC FEATURES

Those solenoid valves are normally equipped by coils type C38, which are energized from DC.

8 COILS type C 38 (Ø 16 mm - 26w)

Coil with ISO/DIN connectors	voltage DC	nominal current [A]	resistance cold [Ω]	nominal power [W]	Insulation class
C38-012C	V12 DC	2,2	5,6	26	H
C38-024C	V24 DC	1,1	22,2	26	

C38

5 INSTALLATION DIMENSIONS (mm)

7 INSTALLATION

EVMD.78.04 valves are to be installed in cavity 7/8" 14 UNF

9 CONNECTION OPTIONS

C38/****
DIN 43650/A-ISO 4400

C38/A-****
AMP JUNIOR

- Class "H" coil as from the IEC 85 standard.
- Class H wire (200 C°)
- Duty cycle ED 100%
- Magnetic circuit encapsulated with thermoplastic resins.
- Standard colour black.
- Metallic parts protected against oxidation.

GAS CARTRIDGE-Direct acting-Ball type
CVG14
35 l/min - 35 MPa (350 bar)

1 DESCRIPTION

A screw-in, direct acting, ball type in-line check valve.
 Main use is as a blocking or load-holding device.
 The CVG14 allows flow passage from port 1 to 2: the cartridge has a fully guided check which is spring-biased closed until sufficient pressure is applied at port 1 to open to 2.
 The flow is blocked in the opposite direction (2 to 1).

2 ORDERING CODE

(1)	(2)		(3)
CVG	14	-	*

(1) CVG : valve basic code

(2) 14: size G14

(3)Cracking pressure:
 -: standard 0 bar
 1: 1 bar
 3: 3 bar

3 TECHNICAL DATA

Max flow	20 l/min
Maximum pressure	350 bar (35 MPa)
Max internal leakage	max 4 drops/min 250 bar
Weight	0.013 kg

External surfaces are oxide burnished and corrosion-protected.
 All valve parts are made of high strength steel.
 Reversed installation is possible (except for size G18) yet not recommended.
 Compact size. Gas cavity.
