## Use as a stopper cylinder

When used as a stopper cylinder, only guided drives with plain-bearing guide DFM-...-GF may be used.

In addition, the distance  $l_{max}$ . (→ drawing) must not be exceeded.

The permissible kinetic impact energy at the end stop must also not be exceeded.

$$l_{max.} = \text{Stroke } l + \text{height of stop bracket } L$$

$$l_{max.} = 50 \text{ mm}$$

## Impact mass m as a function of the impact velocity v

DFM-12 ... 25-GF  
Stroke < 30 mm

The values in the above graph are based on the assumption that the workpiece carrier is fitted with a flexible buffer with a deformation of 1 mm. Only guided drives with plain-bearing guide GF and a stroke of < 30 mm may be used.
